# SIGN LANGUAGE

An International Handbook

- ▶ The first encyclopaedic reference book in the field of sign language research
- ▶ Over 40 chapters covering all aspects of the linguistic study of sign languages
- ▶ Extensively illustrated with examples from over 30 sign languages

Sign language linguists show here that all questions relevant to the linguistic investigation of spoken languages can be asked about sign languages. Conversely, questions that sign language linguists consider - even if spoken language researchers have not asked them yet - should also be asked of spoken languages. The HSK handbook Sign Language aims to provide a concise and comprehensive overview of the state of the art in sign language linguistics. It includes 44 chapters, written by leading researchers in the field, that address issues in language typology, sign language grammar, psycholinguistics, neurolinguistics, sociolinguistics, and language documentation and transcription. Crucially, all topics are presented in a way that makes them accessible to linguists who are not familiar with sign language linguistics.

Markus Steinbach, University of Goettingen, Germany; Roland Pfau, University of Amsterdam, The Netherlands; Bencie Woll, University College London, Great Britain.
