

## **On the heterogeneity of projective content**

David Beaver

(Joint work with Judith Tonhauser, Judith Degen, Marie-Catherine de Marneffe, Mandy Simons, and Craige Roberts)

I will present preliminary results from experiments that compare the degree of projectivity and the degree of at-issueness for a range of triggers of projective content. Specifically, we consider what is projected, and what is at-issue, when a question is asked. The triggers include those belonging to class B and class C in the taxonomy Tonhauser et al (2012), including e.g. exclusives, factives, and nominal appositives.
