

Hiwi – Stellen

Department of Silviculture and Forest Ecology of the Temperate Zones offers two Hiwi-positions in the new project of Rooting patterns, root growth, and water uptake in response to interspecific competition

We are looking for students who are motivated to work in the field and laboratory, and who have enough time from March to November 2018. Additionally, students who are interested in doing their Bachelor or Master thesis on the following topics: below ground competitions, fine root distribution, fine roots morphology, fine roots growth and stem growth are highly welcome
