

Joint Guest Lecture Series

The Research Training Groups 2300 (Enrichment of European beech forests with conifers) and 2123 (Conservation of Forest Biodiversity in Multiple-Use Landscapes of Central Europe) jointly hold an online guest lecture series. We invite well-known scientists with topics related to our fields of study to provide insights into their research.

The next presentation will be given by:

Dr. Frank Krumm

Researcher at the Forest Dynamics Unit; Swiss Federal Institute for Forest, Snow and Landscape Research WSL

The title of his talk is:

How to balance forestry and biodiversity conservation on a forest enterprise level

Maintaining and enhancing European forests' biological diversity as well as ensuring their resilience and adaptability so that they can continue providing a broad range of ecosystem services in a rapidly changing environment is key for the sustainability of European societies. Doing so requires more than ever an informed, fluent and effective dialogue between scientists, policy makers, forest landowners, forest managers and nature conservationists.

The modern and pragmatic concept of integrated forest management can be seen as the starting point for improving the sustainability of the forest sector. The authors of the new book "How to balance forestry and biodiversity conservation – a view across Europe" present the basic guidelines of this concept and provide views from science and practice on how to harmonize biodiversity conservation and wood production in a given forest area.

The guest lecture will take place on:

Thursday, 21st January 2021, 14:00 via zoom.

Everyone is invited to join! Please register by sending an email to grk2300@uni-goettingen.de with your name and affiliation or reason why you are interested in the talk.
