

How to Measure Social Sustainability of Transportation Systems

- **Motivation:**
Sustainability is defined as the integration of economic, ecological and social matters. However, it is unclear which dimensions exactly make up the social component of transport systems' sustainability. In this thesis a literature based framework is developed, which allows a structured analysis of the social sustainability of transport systems.
- **Question:**
Which dimensions compose social sustainability of transportation systems and how can it be measured?
- **Research Approach:**
Literature review
- **Goals:**
The goal is to develop a framework, which allows a structured analysis of the social sustainability of transport systems.
