den konsekutiven Master-Studiengang
"Mathematik" (Amtliche Mitteilungen I Nr.
14/2013 S. 313, zuletzt geändert durch
Amtliche Mitteilungen I Nr. 51/2015 S. 1560)**

Module

B.Inf.1103: Informatik III.....	10241
B.Inf.1201: Theoretische Informatik.....	10242
B.Inf.1202: Formale Systeme.....	10244
B.Inf.1203: Betriebssysteme.....	10245
B.Inf.1204: Telematik / Computernetzwerke.....	10246
B.Inf.1206: Datenbanken.....	10247
B.Inf.1209: Softwaretechnik.....	10248
B.Mat.0720: Mathematische Anwendersysteme (Grundlagen).....	10250
B.Mat.0721: Mathematisch orientiertes Programmieren.....	10252
B.Mat.0730: Praktikum Wissenschaftliches Rechnen.....	10254
B.Mat.0740: Stochastisches Praktikum.....	10255
B.Mat.0911: Ein Mehrbenutzerbetriebssystem in der Praxis: Einzelbetrieb.....	10257
B.Mat.0912: Ein Mehrbenutzerbetriebssystem in der Praxis: Netzwerkbetrieb.....	10259
B.Mat.0921: Einführung in TeX/LaTeX und praktische Anwendungen.....	10261
B.Mat.0922: Mathematics information services and electronic publishing.....	10263
B.Mat.0931: Tutorentraining.....	10265
B.Mat.0932: Vermittlung mathematischer Inhalte an ein Fachpublikum.....	10267
B.Mat.0935: Historische, museumspädagogische und technische Aspekte für den Aufbau, Erhalt und die Nutzung wissenschaftlicher Modellsammlungen.....	10268
B.Mat.0936: Medienbildung zu mathematischen Objekten und Problemen.....	10269
B.Mat.0940: Mathematik in der Welt, in der wir leben.....	10270
B.Mat.0950: Mitgliedschaft in der studentischen oder akademischen Selbstverwaltung.....	10272
B.Mat.0951: Ehrenamtliches Engagement in einem mathematischen Umfeld.....	10273
B.Mat.0952: Organisation einer mathematischen Veranstaltung.....	10274
B.Mat.0970: Betriebspraktikum.....	10275
B.Mat.1400: Grundlagen der Maß- und Wahrscheinlichkeitstheorie.....	10276
B.Mat.2100: Partielle Differenzialgleichungen.....	10278
B.Mat.2110: Funktionalanalysis.....	10280
B.Mat.2120: Funktionentheorie.....	10282
B.Mat.2200: Moderne Geometrie.....	10284

B.Mat.2210: Zahlen und Zahlentheorie.....	10286
B.Mat.2300: Weiterführung in Numerischer Mathematik.....	10288
B.Mat.2310: Optimierung.....	10290
B.Mat.2400: Angewandte Statistik.....	10292
B.Mat.3041: Overview on non-life insurance mathematics.....	10294
B.Mat.3042: Overview on life insurance mathematics.....	10295
B.Mat.3043: Non-life insurance mathematics.....	10296
B.Mat.3044: Life insurance mathematics.....	10298
B.Mat.3111: Introduction to analytic number theory.....	10300
B.Mat.3112: Introduction to analysis of partial differential equations.....	10302
B.Mat.3113: Introduction to differential geometry.....	10304
B.Mat.3114: Introduction to algebraic topology.....	10306
B.Mat.3115: Introduction to mathematical methods in physics.....	10308
B.Mat.3121: Introduction to algebraic geometry.....	10310
B.Mat.3122: Introduction to algebraic number theory.....	10312
B.Mat.3123: Introduction to algebraic structures.....	10314
B.Mat.3124: Introduction to groups, geometry and dynamical systems.....	10316
B.Mat.3125: Introduction to non-commutative geometry.....	10318
B.Mat.3131: Introduction to inverse problems.....	10320
B.Mat.3132: Introduction to approximation methods.....	10322
B.Mat.3133: Introduction to numerics of partial differential equations.....	10324
B.Mat.3134: Introduction to optimisation.....	10326
B.Mat.3137: Introduction to variational analysis.....	10328
B.Mat.3138: Introduction to image and geometry processing.....	10330
B.Mat.3139: Introduction to scientific computing / applied mathematics.....	10332
B.Mat.3141: Introduction to applied and mathematical stochastics.....	10334
B.Mat.3142: Introduction to stochastic processes.....	10336
B.Mat.3143: Introduction to stochastic methods of econometrics.....	10338
B.Mat.3144: Introduction to mathematical statistics.....	10340
B.Mat.3145: Introduction to statistical modelling and inference.....	10342
B.Mat.3146: Introduction to multivariate statistics.....	10344

Inhaltsverzeichnis

B.Mat.3311: Advances in analytic number theory.....	10346
B.Mat.3312: Advances in analysis of partial differential equations.....	10348
B.Mat.3313: Advances in differential geometry.....	10350
B.Mat.3314: Advances in algebraic topology.....	10352
B.Mat.3315: Advances in mathematical methods in physics.....	10354
B.Mat.3321: Advances in algebraic geometry.....	10356
B.Mat.3322: Advances in algebraic number theory.....	10358
B.Mat.3323: Advances in algebraic structures.....	10360
B.Mat.3324: Advances in groups, geometry and dynamical systems.....	10362
B.Mat.3325: Advances in non-commutative geometry.....	10364
B.Mat.3331: Advances in inverse problems.....	10366
B.Mat.3332: Advances in approximation methods.....	10368
B.Mat.3333: Advances in numerics of partial differential equations.....	10370
B.Mat.3334: Advances in optimisation.....	10372
B.Mat.3337: Advances in variational analysis.....	10374
B.Mat.3338: Advances in image and geometry processing.....	10376
B.Mat.3339: Advances in scientific computing / applied mathematics.....	10378
B.Mat.3341: Advances in applied and mathematical stochastics.....	10380
B.Mat.3342: Advances in stochastic processes.....	10382
B.Mat.3343: Advances in stochastic methods of econometrics.....	10384
B.Mat.3344: Advances in mathematical statistics.....	10386
B.Mat.3345: Advances in statistical modelling and inference.....	10388
B.Mat.3346: Advances in multivariate statistics.....	10390

Übersicht nach Modulgruppen

I. Study tracks in the Master's Degree programme in Mathematics (M.Sc.)

In the Master's Degree programme in Mathematics, one of the following study tracks has to be chosen, whereas modules with a total of at least 90 C have to be completed successfully in accordance with the following regulations. The regulations for the modules that can be chosen within the scope of a study focus can be found in No. II "Elective courses in Mathematics (graduate studies)".

Im Master-Studiengang „Mathematik“ ist eines der nachfolgenden Studienprofile zu wählen, wobei nach Maßgabe der folgenden Bestimmungen Module im Umfang von wenigstens 90 C erfolgreich zu absolvieren sind. Die im Rahmen eines Schwerpunktes wählbaren Module sind unter "II. Elective courses in Mathematics (graduate studies)" geregelt.

1. Study track F "Research-oriented - general"

In the study track F "Research-oriented - general" modules have to be completed successfully according to the regulations below.

a. Elective compulsory modules in Mathematics (60 C)

In the study track F, elective compulsory modules in the subject mathematics with a total of at least 60 C have to be completed successfully according to the following regulations:

Im Studienprofil F müssen Wahlpflichtmodule im Fach Mathematik im Umfang von insgesamt mindestens 60 C nach Maßgabe der folgenden Bestimmungen erfolgreich absolviert werden:

i) In the study foci SP 1 or SP 2, modules with a total of at least 12 C have to be completed successfully, thereof at least a seminar module or an advanced seminar module with at least 3C (M.Mat.481*, M.Mat.482*, M.Mat.491*, M.Mat.492*). If the Master's thesis is in one out of these two study foci, a total of at least 6 C of the modules out of the other study focus have to be completed successfully.

Aus den Schwerpunkten SP 1 oder SP 2 müssen Module im Umfang von insgesamt wenigstens 12 C erfolgreich absolviert werden, davon mindestens ein Seminar- oder Oberseminarmodul (M.Mat.481*, M.Mat.482*, M.Mat.491*, M.Mat.492*) im Umfang von wenigstens 3 C; ist einer dieser beiden Schwerpunkte der Studienschwerpunkt der Masterarbeit, so müssen mindestens 6 C aus Modulen des anderen Schwerpunkts erworben werden.

ii) In the study foci SP 3 or SP 4, modules with a total of at least 12 C have to be completed successfully, thereof at least a seminar module or an advanced seminar module with at least 3C (M.Mat.483*, M.Mat.484*, M.Mat.493*, M.Mat.494*). If the Master's thesis is in one out of these two study foci, a total of at least 6 C of the modules out of the other study focus have to be completed successfully.

Aus den Schwerpunkten SP 3 oder SP 4 müssen Module im Umfang von insgesamt wenigstens 12 C erfolgreich absolviert werden, davon mindestens ein Seminar- oder Oberseminarmodul (M.Mat.483*, M.Mat.484*, M.Mat.493*, M.Mat.494*) im Umfang von wenigstens 3 C; ist einer dieser beiden Schwerpunkte der Studienschwerpunkt der Masterarbeit, so müssen mindestens 6 C aus Modulen des anderen Schwerpunkts erworben werden.

iii) Further modules can be chosen freely out of the modules offered in all four mathematical study foci.

Darüber hinaus kann frei aus den angebotenen Modulen aller vier mathematischen Studienschwerpunkte gewählt werden.

b. Elective compulsory modules in the minor subject (18 C)

In the study track F, modules with at total of at least 18 C have to be completed successfully in one out of the following minor subjects: Astrophysics, Business Administration, Chemistry, Computer Science, Philosophy, Physics, Economics. The regulations for the modules to choose from in each case can be found in No.III "Minor subjects in the graduate programme in Mathematics".

Im Studienprofil F sind Module im Gesamtumfang von wenigstens 18 C in einem der folgenden Nebenfächer erfolgreich zu absolvieren: Astrophysik, Betriebswirtschaftslehre, Chemie, Informatik, Philosophie, Physik, Volkswirtschaftslehre. Die jeweils wählbaren Module sind in "III. Minor subjects in the graduate programme in Mathematics" geregelt.

c. Elective modules in the key competencies area (12 C)

Modules with a total of at least 12 C have to be completed successfully, among them one out of the key competencies modules offered by the Unit Mathematics, according to the regulations in No. IV. "Key competencies in the graduate programme in Mathematics". The remaining modules can be chosen freely from the cross-faculty key competencies offer. The choice of other modules (alternative modules) is only possible with the approval of the dean of students of the faculty that offers the module. The choice of an alternative module has to be reported to the Study Office Mathematics in advance.

Es sind Module im Gesamtumfang von wenigstens 12 C erfolgreich zu absolvieren, darunter eines der Schlüsselkompetenzmodule aus dem Angebot der Lehreinheit Mathematik nach "IV. Key competencies in the graduate programme in Mathematics". Die übrigen Module können frei aus dem universitätsweiten Schlüsselkompetenzangebot gewählt werden. Die Belegung anderer Module (Alternativmodule) ist mit Zustimmung der Studiendekanin oder des Studiendekans der Fakultät, die das Modul anbietet, ebenfalls möglich. Die Belegung eines Alternativmoduls ist dem Studienbüro vorab anzusegnen.

2. Study track W "Economathematics"

In the research-oriented study track W "Economathematics" modules below have to be completed successfully according to the regulations.

Im forschungsorientierten Studienprofil W "Wirtschaftsmathematik" sind Module nach Maßgabe der nachstehenden Bestimmungen erfolgreich zu absolvieren.

a. Elective compulsory modules in the subject-specific area (60 C)

In the study track W, elective compulsory modules in the subject Mathematics with a total of at least 60 C have to be completed successfully according to the following regulations:

Im Studienprofil W müssen Wahlpflichtmodule im Fach Mathematik im Umfang von insgesamt mindestens 60 C nach Maßgabe der folgenden Bestimmungen erfolgreich absolviert werden:

aa. Elective compulsory modules in SP 3

In the study focus SP 3, modules with a total of at least 18 C have to be completed successfully, thereof the following module:

Es müssen Module aus SP 3 im Umfang von insgesamt wenigstens 18 C erfolgreich absolviert werden, darunter das folgende Modul:

M.Mat.3130: Operations research (9 C, 6 SWS)..... 10433

bb. Elective compulsory modules in SP 4

In the study focus SP 4, modules with a total of at least 18 C have to be completed successfully, thereof the following module:

Es müssen Module aus SP 4 im Umfang von insgesamt wenigstens 18 C erfolgreich absolviert werden, darunter das folgende Modul:

M.Mat.3140: Mathematical statistics (9 C, 6 SWS)..... 10435

cc. (Advanced) seminar in the study focus

In the study focus of the Master's thesis, a seminar module or an advanced seminar module with 3 C (M.Mat.483*, M.Mat.484*, M.Mat.493*, M.Mat.494*) has to be completed successfully. Only the study foci SP 3 or SP 4 are permitted as study focus of the Master's thesis.

Im Studienschwerpunkt der Masterarbeit muss ein Seminar- oder Oberseminarmodul im Umfang von 3 C erfolgreich absolviert werden. Als Schwerpunkt der Masterarbeit sind nur die Schwerpunkte SP 3 oder SP 4 zugelassen.

dd. Practical Course

One out of the following practical course modules with 10 C has to be completed successfully:

Eines der folgenden Praktikumsmodule im Umfang von 10 C muss erfolgreich absolviert werden:

M.Mat.0731: Advanced practical course in scientific computing (10 C, 4 SWS)..... 10426

M.Mat.0741: Advanced practical course in stochastics (10 C, 6 SWS)..... 10428

ee. Computer science

In the area No. III)4)b) "Computer science - compulsory elective modules", one module with 5 C has to be completed successfully:

Es muss ein Modul aus dem Bereich "III)4)b) Informatik – Wahlpflichtmodule" im Umfang von 5 C erfolgreich absolviert werden.

ff. Elective modules

Furthermore, in the study foci or in one of the minor subjects Business Administration, Economics or Business Law, modules with a total of at least 6 C have to be completed successfully.

Ferner müssen Module im Gesamtumfang von wenigstens 6 C aus einem der Schwerpunkte oder aus den Nebenfächern Betriebswirtschaftslehre, Volkswirtschaftslehre oder Wirtschaftsrecht erfolgreich absolviert werden.

b. Elective compulsory modules in the minor subject (14 C)

In the study track W, in one of the following minor subjects modules with a total of at least 14 C have to be completed successfully: Business Administration, Economics or Business law. The regulations for the modules that can be chosen can be found in No.III. "Minor subjects in the graduate programme in Mathematics".

Im Studienprofil W sind Module im Gesamtumfang von mindestens 14 C in den folgenden Nebenfächern erfolgreich zu absolvieren: Betriebswirtschaftslehre, Volkswirtschaftslehre oder Wirtschaftsrecht. Die jeweils wählbaren Module sind in "III. Minor subjects in the graduate programme in Mathematics" geregelt.

c. Elective modules in the key competencies area (16 C)

Modules with a total of at least 16 C have to be completed successfully according to the following regulations:

Es sind Module im Gesamtumfang von wenigstens 16 C nach Maßgabe der folgenden Bestimmungen erfolgreich zu absolvieren.

aa. Internship

In the study track W, the following module with 10 C has to be completed successfully:

Im Studienprofil W ist das folgende Modul im Umfang von 10 C erfolgreich zu absolvieren:

M.Mat.0971: Internship (10 C).....	10430
------------------------------------	-------

bb. Further key competencies modules

Furthermore, modules can be chosen freely from the cross-faculty key competencies offer. The choice of other modules (alternative modules) is only possible with the approval of the dean of students of the faculty that offers the module. The choice of an alternative module has to be reported to the Study Office Mathematics in advance. It is recommended to choose one of the following modules:

Ferner kann frei aus dem universitätsweiten Schlüsselkompetenzangebot gewählt werden. Die Belegung anderer Module (Alternativmodule) ist mit Zustimmung der Studiendekanin oder des Studiendekans der Fakultät, die das Modul anbietet, ebenfalls möglich. Die Belegung eines Alternativmoduls ist dem Studienbüro vorab anzugeben. Es wird empfohlen, eines der folgenden Module zu absolvieren:

SK.FS.EN-FW-C1-1: Business English I - C1.1 (6 C, 4 SWS).....	10684
---	-------

SK.FS.EN-FW-C1-2: Business English II - C1.2 (6 C, 4 SWS).....	10686
--	-------

3. Study track Phy "Physics"

In the research-oriented study track Phy "Physics", modules below have to be completed successfully according to the regulations.

Im forschungsorientierten Studienprofil Phy "Physik" sind Module nach Maßgabe der nachstehenden Bestimmungen erfolgreich zu absolvieren.

a. Elective compulsory modules in Mathematics (60 C)

In the study track Phy, elective compulsory modules covering a total of at least 60 C have to be completed successfully according to the following regulations:

Im Studienprofil Phy müssen Wahlpflichtmodule im Umfang von insgesamt mindestens 60 C nach Maßgabe der folgenden Bestimmungen erfolgreich absolviert werden.

i) In the study foci SP 2 or SP 4, elective compulsory modules with a total of at least 12 C have to be completed successfully, thereof at least a seminar module or an advanced seminar module with at least 3 C (M.Mat.483*, M.Mat.484*, M.Mat.493*, M.Mat.494*).

Es müssen Wahlpflichtmodule aus den Schwerpunkten SP 3 oder SP 4 im Gesamtumfang von wenigstens 12 C erfolgreich absolviert werden, davon mindestens ein Seminar- oder Oberseminarmodul im Umfang von wenigstens 3 C.

ii) In the cycles "Mathematical Methods in Physics", "Analysis of Partial Differential Equations", "Differential Geometry", "Algebraic Topology", "Non-commutative Geometry" and "Groups, Geometry and Dynamical Systems", modules with a total of at least 12 C have to be completed successfully, thereof at least a seminar module or an advanced seminar module with at least 3C.

Es müssen Module im Gesamtumfang von mindestens 12 C aus den Zyklen Mathematische Methoden der Physik, Analysis partieller Differenzialgleichungen, Differenzialgeometrie, Algebraische Topologie, Nichtkommutative Geometrie sowie Gruppen, Geometrie und Dynamische

Systeme erfolgreich absolviert werden, davon mindestens ein Seminar- oder Oberseminarmodul im Umfang von wenigstens 3 C.

iii) Further modules can be chosen freely out the modules offered in all four mathematical study foci SP1-4. Additionally, modules in the section No. III.6. "Physics" can be chosen freely, however this option is restricted to modules with a total of at most 12 C.

Ferner kann frei aus den angebotenen Modulen aller vier mathematischen Studienschwerpunkte gewählt werden. Weiterhin können Module im Gesamtumfang von maximal 12 C aus dem Bereich "III.6. Physics" frei gewählt werden.

b. Elective compulsory modules in the minor subject (18 C)

In the study track Phy, in the minor subject "Physics", modules with a total of at least 18 C have to be completed successfully. The regulations for the modules that can be chosen can be found in No.III "Minor subjects in the graduate programme in Mathematics".

Im Studienprofil Phy sind Module im Gesamtumfang von mindestens 18 C im Nebenfach Physik erfolgreich zu absolvieren. Die jeweils wählbaren Module sind in "III. Minor subjects in the graduate programme in Mathematics" geregelt.

c. Elective modules of the key competencies area (12 C)

At least one key competencies module out of the offer of the Faculty of Physics or out of the offer of the Unit Mathematics has to be completed successfully. Furthermore, modules can be chosen freely from the cross-faculty key competencies offer. The choice of other modules (alternative modules) is only possible with the approval of the dean of students of the faculty that offers the module. The choice of an alternative module has to be reported to the Study Office Mathematics in advance.

Es ist ein Schlüsselkompetenzmodul aus dem Angebot der Fakultät für Physik oder eines aus dem Angebot der Lehreinheit Mathematik erfolgreich zu absolvieren. Ferner können frei Module aus dem universitätsweiten Schlüsselkompetenzangebot gewählt werden. Die Belegung anderer Module (Alternativmodule) ist mit Zustimmung der Studiendekanin oder des Studiendekans der Fakultät, die das Modul anbietet, ebenfalls möglich. Die Belegung eines Alternativmoduls ist dem Studienbüro vorab anzugeben.

II. Elective courses in Mathematics (graduate studies)

1. Elective compulsory modules in study focus SP 1 "Analysis, geometry, topology"

M.Mat.3110: Higher analysis (9 C, 6 SWS).....	10431
B.Mat.3111: Introduction to analytic number theory (9 C, 6 SWS).....	10300
B.Mat.3112: Introduction to analysis of partial differential equations (9 C, 6 SWS).....	10302
B.Mat.3113: Introduction to differential geometry (9 C, 6 SWS).....	10304
B.Mat.3114: Introduction to algebraic topology (9 C, 6 SWS).....	10306
B.Mat.3115: Introduction to mathematical methods in physics (9 C, 6 SWS).....	10308
B.Mat.3311: Advances in analytic number theory (9 C, 6 SWS).....	10346
B.Mat.3312: Advances in analysis of partial differential equations (9 C, 6 SWS).....	10348

B.Mat.3313: Advances in differential geometry (9 C, 6 SWS).....	10350
B.Mat.3314: Advances in algebraic topology (9 C, 6 SWS).....	10352
B.Mat.3315: Advances in mathematical methods in physics (9 C, 6 SWS).....	10354
M.Mat.4511: Specialisation in analytic number theory (9 C, 6 SWS).....	10437
M.Mat.4512: Specialisation in analysis of partial differential equations (9 C, 6 SWS).....	10439
M.Mat.4513: Specialisation in differential geometry (9 C, 6 SWS).....	10441
M.Mat.4514: Specialisation in algebraic topology (9 C, 6 SWS).....	10443
M.Mat.4515: Specialisation in mathematical methods in physics (9 C, 6 SWS).....	10445
M.Mat.4611: Aspects of analytic number theory (6 C, 4 SWS).....	10483
M.Mat.4612: Aspects of analysis of partial differential equations (6 C, 4 SWS).....	10485
M.Mat.4613: Aspects of differential geometry (6 C, 4 SWS).....	10487
M.Mat.4614: Aspects of algebraic topology (6 C, 4 SWS).....	10489
M.Mat.4615: Aspects of mathematical methods in physics (6 C, 4 SWS).....	10491
M.Mat.4711: Special course in analytic number theory (3 C, 2 SWS).....	10529
M.Mat.4712: Special course in analysis of partial differential equations (3 C, 2 SWS).....	10531
M.Mat.4713: Special course in differential geometry (3 C, 2 SWS).....	10533
M.Mat.4714: Special course in algebraic topology (3 C, 2 SWS).....	10535
M.Mat.4715: Special course in mathematical methods in physics (3 C, 2 SWS).....	10537
M.Mat.4811: Seminar on analytic number theory (3 C, 2 SWS).....	10575
M.Mat.4812: Seminar on analysis of partial differential equations (3 C, 2 SWS).....	10577
M.Mat.4813: Seminar on differential geometry (3 C, 2 SWS).....	10579
M.Mat.4814: Seminar on algebraic topology (3 C, 2 SWS).....	10581
M.Mat.4815: Seminar on mathematical methods in physics (3 C, 2 SWS).....	10583
M.Mat.4911: Advanced seminar on analytic number theory (3 C, 2 SWS).....	10621
M.Mat.4912: Advanced seminar on analysis of partial differential equations (3 C, 2 SWS).....	10623
M.Mat.4913: Advanced seminar on differential geometry (3 C, 2 SWS).....	10625
M.Mat.4914: Advanced seminar on algebraic topology (3 C, 2 SWS).....	10627
M.Mat.4915: Advanced seminar on mathematical methods in physics (3 C, 2 SWS).....	10629

2. Elective compulsory modules in study focus SP 2 "Algebra, geometry, number theory"

Inhaltsverzeichnis

B.Mat.3346: Advances in multivariate statistics (9 C, 6 SWS).....	10390
M.Mat.4541: Specialisation in applied and mathematical stochastics (9 C, 6 SWS).....	10471
M.Mat.4542: Specialisation in stochastic processes (9 C, 6 SWS).....	10473
M.Mat.4543: Specialisation in stochastic methods in econometrics (9 C, 6 SWS).....	10475
M.Mat.4544: Specialisation in mathematical statistics (9 C, 6 SWS).....	10477
M.Mat.4545: Specialisation in statistical modelling and inference (9 C, 6 SWS).....	10479
M.Mat.4546: Specialisation in multivariate statistics (9 C, 6 SWS).....	10481
M.Mat.4641: Aspects of applied and mathematical stochastics (6 C, 4 SWS).....	10517
M.Mat.4642: Aspects of stochastic processes (6 C, 4 SWS).....	10519
M.Mat.4643: Aspects of stochastics methods of econometrics (6 C, 4 SWS).....	10521
M.Mat.4644: Aspects of mathematical statistics (6 C, 4 SWS).....	10523
M.Mat.4645: Aspects of statistical modelling and inference (6 C, 4 SWS).....	10525
M.Mat.4646: Aspects of multivariate statistics (6 C, 4 SWS).....	10527
M.Mat.4741: Special course in applied and mathematical stochastics (3 C, 2 SWS).....	10563

M.Mat.4742: Special course in stochastic processes (3 C, 2 SWS).....	10565
M.Mat.4743: Special course in stochastic methods of econometrics (3 C, 2 SWS).....	10567
M.Mat.4744: Special course in mathematical statistics (3 C, 2 SWS).....	10569
M.Mat.4745: Special course in statistical modelling and inference (3 C, 2 SWS).....	10571
M.Mat.4746: Special course in multivariate statistics (3 C, 2 SWS).....	10573
M.Mat.4841: Seminar on applied and mathematical stochastics (3 C, 2 SWS).....	10609
M.Mat.4842: Seminar on stochastic processes (3 C, 2 SWS).....	10611
M.Mat.4843: Seminar on stochastic methods of econometrics (3 C, 2 SWS).....	10613
M.Mat.4844: Seminar on mathematical statistics (3 C, 2 SWS).....	10615
M.Mat.4845: Seminar on statistical modelling and inference (3 C, 2 SWS).....	10617
M.Mat.4846: Seminar on multivariate statistics (3 C, 2 SWS).....	10619
M.Mat.4941: Advanced seminar on applied and mathematical stochastics (3 C, 2 SWS).....	10655
M.Mat.4942: Advanced seminar on stochastic processes (3 C, 2 SWS).....	10657
M.Mat.4943: Advanced seminar on stochastic methods in econometrics (3 C, 2 SWS).....	10659
M.Mat.4944: Advanced seminar on mathematical statistics (3 C, 2 SWS).....	10661
M.Mat.4945: Advanced seminar on statistical modelling and inference (3 C, 2 SWS).....	10663
M.Mat.4946: Advanced seminar on multivariate statistics (3 C, 2 SWS).....	10665

III. Minor subjects in the graduate programme in Mathematics

1. Astrophysics

In "Astrophysics" as a minor subject the following module has to be completed successfully.
Furthermore, all modules with module number B.Phys.55** may be chosen.

Im Nebenfach "Astrophysik" ist folgendes Modul erfolgreich zu absolvieren. Weiterhin stehen alle Module mit Modulnummern B.phy.55** zur Auswahl.

B.Phys.1551: Einführung in die Astrophysik (8 C, 6 SWS).....	10398
--	-------

2. Business Administration

In "Business Administration" as a minor subject the following modules may be chosen.

Im Nebenfach "Betriebswirtschaftslehre" stehen folgende Module zur Auswahl:

B.WIWI-WIN.0001: Management der Informationssysteme (6 C, 2 SWS).....	10417
B.WIWI-WIN.0002: Management der Informationswirtschaft (6 C, 6 SWS).....	10419
B.WIWI-BWL.0014: Rechnungslegung der Unternehmung (6 C, 4 SWS).....	10399
B.WIWI-BWL.0038: Supply Chain Management (6 C, 2 SWS).....	10400

M.WIWI-BWL.0001: Finanzwirtschaft (6 C, 4 SWS).....	10670
M.WIWI-BWL.0004: Financial Risk Management (6 C, 4 SWS).....	10672
M.WIWI-BWL.0008: Derivate (6 C, 4 SWS).....	10674
M.WIWI-BWL.0023: Management Accounting (6 C, 3 SWS).....	10676
M.WIWI-BWL.0034: Logistik- und Supply Chain Management (6 C, 3 SWS).....	10677
M.WIWI-QMW.0009: Introduction to Time Series Analysis (6 C, 4 SWS).....	10680

3. Chemistry

In "Chemistry" as a minor subject the following module may be chosen. Furthermore all modules in Chemistry out of the graduate programm in Chemistry (module number M.Che.****) can be chosen. Selection of modules out of the undergraduate programme in Chemistry may be selected provided approval through the dean of studies of the Faculty of Chemistry. In this case the Study Office Mathematics must be informed beforehand.

Im Nebenfach "Chemie" stehen folgende Module zur Auswahl. Darüber hinaus können alle Chemie-Module aus dem Master-Studiengang "Chemie" (Modul-Nummern M.Che.****) gewählt werden. Die Belegung von Chemie-Modulen aus dem Bachelor-Studiengang "Chemie" ist mit Zustimmung durch die Studiendekanin oder den Studiendekan der Fakultät für Chemie zulässig. Die Belegung eines solchen Moduls ist dem Studienbüro vorab anzugeben.

M.Che.1311: Schwingungsspektroskopie und zwischenmolekulare Dynamik (6 C, 4 SWS).....	10421
M.Che.1312: Physikalische Chemie der kondensierten Materie (6 C, 4 SWS).....	10422
M.Che.1313: Elektronische Spektroskopie und Reaktionsdynamik (6 C, 4 SWS).....	10423
M.Che.1314: Biophysikalische Chemie (6 C, 4 SWS).....	10424
M.Che.1315: Chemical Dynamics at Surfaces (6 C, 4 SWS).....	10425

4. Computer Science

a. Computer Science - compulsory modules

In "Computer Science" as a minor subject the following module has to be completed successfully:

Im Nebenfach "Informatik" ist folgendes Modul erfolgreich zu absolvieren:

B.Inf.1103: Informatik III (10 C, 6 SWS).....	10241
---	-------

b. Computer science - compulsory elective modules

Furthermore all modules in Computer Science out of the graduate programme "Applied computer science" (module numbers M.Inf.****) can be chosen as well as the following modules:

Weiterhin stehen alle Informatik-Module aus dem Masterstudiengang "Angewandte Informatik" (Modul-Nummern M.Inf.****) sowie die folgenden Module zur Auswahl:

B.Inf.1201: Theoretische Informatik (5 C, 3 SWS).....	10242
B.Inf.1202: Formale Systeme (5 C, 3 SWS).....	10244
B.Inf.1203: Betriebssysteme (5 C, 3 SWS).....	10245

B.Inf.1204: Telematik / Computernetzwerke (5 C, 3 SWS).....	10246
B.Inf.1206: Datenbanken (5 C, 3 SWS).....	10247
B.Inf.1209: Softwaretechnik (5 C, 3 SWS).....	10248

5. Philosophy

In "Philosophy" as a minor subject the following modules can be chosen; for at least one of the selected modules a term paper has to be prepared.

Im Nebenfach "Philosophie" stehen folgende Module zur Auswahl; in einem der gewählten Module muss eine Hausarbeit angefertigt werden:

B.Phi.01: Basismodul Theoretische Philosophie (9 C, 4 SWS).....	10392
B.Phi.02: Basismodul Praktische Philosophie (9 C, 4 SWS).....	10394
B.Phi.03: Basismodul Geschichte der Philosophie (9 C, 4 SWS).....	10396
M.Phi.101: Ausgewählte Themen der Theoretischen Philosophie (9 C, 4 SWS).....	10667
M.Phi.102: Ausgewählte Themen der Praktischen Philosophie (9 C, 4 SWS).....	10668
M.Phi.103: Ausgewählte Themen der Geschichte der Philosophie (9 C, 4 SWS).....	10669

6. Physics

In "Physics" as a minor subject all modules with module number B.Phy.**** or M.Phy.*** can be chosen, with the exception of the following module:

Im Nebenfach "Physik" stehen alle Module mit den Modul-Nummer B.Phy.**** oder M.Phy.**** zur Auswahl. Davon abweichend kann folgendes Modul nicht absolviert werden:

- B.Phy.1301 "Rechenmethoden der Physik"

7. Economics

In "Economics" as a minor subject the following modules can be chosen:

Im Nebenfach "Volkswirtschaftslehre" stehen folgende Module zur Auswahl:

B.WIWI-VWL.0001: Mikroökonomik II (6 C, 4 SWS).....	10401
B.WIWI-VWL.0002: Makroökonomik II (6 C, 4 SWS).....	10403
B.WIWI-VWL.0005: Grundlagen der internationalen Wirtschaftsbeziehungen (6 C, 4 SWS).....	10405
B.WIWI-VWL.0006: Wachstum und Entwicklung (6 C, 4 SWS).....	10407
B.WIWI-VWL.0007: Einführung in die Ökonometrie (6 C, 6 SWS).....	10408
B.WIWI-VWL.0008: Geldtheorie und Geldpolitik (6 C, 4 SWS).....	10409
B.WIWI-VWL.0009: Arbeitsmarktökonomik (6 C, 4 SWS).....	10411
B.WIWI-VWL.0010: Einführung in die Institutionenökonomik (6 C, 2 SWS).....	10413
B.WIWI-VWL.0028: Einführung in die Spieltheorie (6 C, 4 SWS).....	10415
B.WIWI-VWL.0059: International Financial Markets (6 C, 2 SWS).....	10416

M.WIWI-VWL.0041: Panel Data Econometrics (6 C, 4 SWS).....	10681
M.WIWI-QMW.0004: Econometrics I (6 C, 4 SWS).....	10679
M.WIWI-QMW.0009: Introduction to Time Series Analysis (6 C, 4 SWS).....	10680

8. Business Law (Nebenfach)

In the study track Economathematics, in "Business Law" as a minor subject the module below as well as modules out of the core curriculum of the Bachelor's programme with two subjects, subject "Law", can be chosen, provided the required previous knowledge in each case is given and with the exception of the modules of the basic courses in Civil Law (module numbers S.RW.011*). It is especially recommended to choose modules in one of the module packets in the practice-oriented track of the 2FBA undergraduate programme as well as to participate in a study advisory service.

Im Studienprofil W können im Nebenfach "Wirtschaftsrecht" mit Ausnahme der Grundkurs-Module im Bürgerlichen Recht (Modulnummern S.RW.011*) das nachstehende Modul sowie alle Module aus dem Kerncurriculum des Teilstudiengangs „Rechtswissenschaften“ des Zwei-Fächer-Bachelor-Studiengangs (2FBA) bei Vorliegen der jeweils erforderlichen Vorkenntnisse belegt werden. Empfohlen wird, insbesondere Module zu wählen, die einem der rechtswissenschaftlichen Modulpakete im berufsfeldbezogenen Profil des 2FBA zugeordnet sind, sowie die Teilnahme an einer Studienberatung.

S.RW.1111: Einführung in das Zivilrecht (Vorlesung und Übung) (8 C, 6 SWS).....	10682
---	-------

IV. Key competencies in the graduate programme in Mathematics

Within the graduate programme in Mathematics, the Unit Mathematics offers the following modules.

Die Lehreinheit Mathematik bietet im Master-Studiengang "Mathematik" folgende Schlüsselkompetenzmodule an.

B.Mat.0720: Mathematische Anwendersysteme (Grundlagen) (3 C, 2 SWS).....	10250
B.Mat.0721: Mathematisch orientiertes Programmieren (5 C, 3 SWS).....	10252
B.Mat.0730: Praktikum Wissenschaftliches Rechnen (9 C, 4 SWS).....	10254
M.Mat.0731: Advanced practical course in scientific computing (10 C, 4 SWS).....	10426
B.Mat.0740: Stochastisches Praktikum (9 C, 6 SWS).....	10255
M.Mat.0741: Advanced practical course in stochastics (10 C, 6 SWS).....	10428
B.Mat.0911: Ein Mehrbenutzerbetriebssystem in der Praxis: Einzelbetrieb (3 C, 2 SWS).....	10257
B.Mat.0912: Ein Mehrbenutzerbetriebssystem in der Praxis: Netzwerkbetrieb (3 C, 2 SWS).....	10259
B.Mat.0921: Einführung in TeX/LaTeX und praktische Anwendungen (3 C, 2 SWS).....	10261
B.Mat.0922: Mathematics information services and electronic publishing (3 C, 2 SWS).....	10263
B.Mat.0931: Tutorentraining (4 C, 2 SWS).....	10265
B.Mat.0932: Vermittlung mathematischer Inhalte an ein Fachpublikum (3 C, 2 SWS).....	10267
B.Mat.0935: Historische, museumspädagogische und technische Aspekte für den Aufbau, Erhalt und die Nutzung wissenschaftlicher Modellsammlungen (4 C, 2 SWS).....	10268
B.Mat.0936: Medienbildung zu mathematischen Objekten und Problemen (4 C, 2 SWS).....	10269

B.Mat.0940: Mathematik in der Welt, in der wir leben (3 C, 2 SWS).....	10270
B.Mat.0950: Mitgliedschaft in der studentischen oder akademischen Selbstverwaltung (3 C, 1 SWS)	10272
B.Mat.0951: Ehrenamtliches Engagement in einem mathematischen Umfeld (3 C, 1 SWS).....	10273
B.Mat.0952: Organisation einer mathematischen Veranstaltung (3 C, 2 SWS).....	10274
B.Mat.0970: Betriebspraktikum (8 C).....	10275
M.Mat.0971: Internship (10 C).....	10430

V. Master's thesis

By successfully completing a Master's thesis students earn 30 C.

VI. Additional optional modules ("Zusatzmodule") (graduate studies)

In addition to the compulsory, the elective compulsory and the elective modules, additional optional modules can be completed, a distinction is made between two classes.

Es können weitere als die erforderlichen Module als Zusatzmodule absolviert werden. Es wird zwischen den nachstehenden Gruppen unterschieden.

1. Additional optional modules ("Zusatzmodule") in Mathematics (graduate studies)

Upon written request the grades of additional optional modules ("Zusatzmodule") are counted towards the overall grade of the Master's Degree. This option is restricted to modules with numbers B.Mat.**** and M.Mat.***** and it is limited to a total of 30 C. These modules are listed as additional optional courses on the Master's Degree certificate and the Transcript of Records.

Auf Antrag werden Noten von freiwilligen Zusatzleistungen ("Zusatzmodule") in Modulen B.Mat.**** oder M.Mat.***** des Masterstudiengangs Mathematik im Umfang von höchstens 30 C bei der Berechnung des Gesamtergebnisses der Bachelorprüfung berücksichtigt. Diese Zusatzmodule werden als freiwillige Zusatzleistungen in Zeugnis und Zeugnisergänzung (Diploma Supplement) ausgewiesen.

2. Further additional optional modules (graduate studies)

Beyond the additional modules mentioned in the preceding item, further modules not required for the Master's Degree can be completed. These are listed as additional optional modules ("Zusatzmodule") on the Master's Degree certificate and the Transcript of Records, too. However, the respective grades will **not** count towards the overall grade of the Master's Degree. Pre-approval is required in case a module is not listed in this module handbook.

Über die in dem vorhergehenden Punkt genannten Zusatzmodule hinaus können weitere, für den Masterabschluss nicht erforderliche Module als Zusatzmodule absolviert werden. Diese werden in Zeugnis und Zeugnisergänzung (Transcript of Records) als freiwillige Zusatzleistungen gelistet, jedoch bei der Berechnung des Gesamtergebnisses der Bachelorprüfung **nicht** berücksichtigt. Im Fall von Modulen, die nicht in diesem Modulhandbuch genannt werden, muss die Belegung vorab genehmigt werden.

VII. Modulpakete "Mathematik" im Umfang von 36 C oder 18 C (belegbar ausschließlich im Rahmen eines anderen geeigneten Master-Studiengangs)

Die Lehreinheit Mathematik bietet folgende Modulpakete für Studierende anderer Studiengänge an. Studierende des Master-Studiengangs „Mathematik“ können das Modul B.Mat.1400 und die Module der

Form B.Mat.2XXX ausschließlich als freiwillige Zusatzprüfungen absolvieren; dabei fließt die Note nicht in das Gesamtergebnis der Masterprüfung im Master-Studiengang „Mathematik“ ein.

1. Zugangsvoraussetzungen

Für die Modulpakete „Mathematik“ im Umfang von 36 C bzw. 18 C gelten folgende gemeinsame Zugangsvoraussetzungen:

Nachweis von Leistungen aus Grundlagen der Mathematik im Umfang von insgesamt wenigstens 33 C, darunter Grundlagen der Analysis im Umfang von insgesamt wenigstens 18 C (z.B. durch die Module B.Mat.0011 und B.Mat.0021) sowie der Analytischen Geometrie und Linearen Algebra im Umfang von insgesamt wenigstens 15 C (z.B. durch die Module B.Mat.0012 und B.Mat.0026). Ferner der Nachweis weiterführender Leistungen der reinen oder angewandten Mathematik im Umfang von insgesamt wenigstens 21 C.

2. Modulpaket "Mathematik" im Umfang von 36 C

Es müssen aus dem nachfolgenden Angebot Module im Umfang von insgesamt wenigstens 36 C erfolgreich absolviert werden. Es können weiterführende mathematische Module des Bachelor-Studiengangs „Mathematik“ der Georg-August-Universität Göttingen (Modulnummern B.Mat.3XXX) oder mathematische Wahlpflichtmodule aus dem Modulverzeichnis des Master-Studiengangs „Mathematik“ der Georg-August-Universität Göttingen (Modulnummern M.Mat.4XXX) absolviert werden. Empfohlen werden folgende Module:

B.Mat.1400: Grundlagen der Maß- und Wahrscheinlichkeitstheorie (9 C, 6 SWS).....	10276
B.Mat.2100: Partielle Differentialgleichungen (9 C, 6 SWS).....	10278
B.Mat.2110: Funktionalanalysis (9 C, 6 SWS).....	10280
B.Mat.2120: Funktionentheorie (9 C, 6 SWS).....	10282
B.Mat.2200: Moderne Geometrie (9 C, 6 SWS).....	10284
B.Mat.2210: Zahlen und Zahlentheorie (9 C, 6 SWS).....	10286
B.Mat.2300: Weiterführung in Numerischer Mathematik (9 C, 6 SWS).....	10288
B.Mat.2310: Optimierung (9 C, 6 SWS).....	10290
B.Mat.2400: Angewandte Statistik (9 C, 6 SWS).....	10292

3. Modulpaket "Mathematik" im Umfang von 18 C

Es müssen aus dem nachfolgenden Angebot Module im Umfang von insgesamt wenigstens 18 C erfolgreich absolviert werden. Es können weiterführende mathematische Module des Bachelor-Studiengangs „Mathematik“ der Georg-August-Universität Göttingen (Modulnummern B.Mat.3XXX) oder mathematische Wahlpflichtmodule aus dem Modulverzeichnis des Master-Studiengangs „Mathematik“ der Georg-August-Universität Göttingen (Modulnummern M.Mat.4XXX) absolviert werden. Empfohlen werden folgende Module:

B.Mat.1400: Grundlagen der Maß- und Wahrscheinlichkeitstheorie (9 C, 6 SWS).....	10276
B.Mat.2100: Partielle Differentialgleichungen (9 C, 6 SWS).....	10278
B.Mat.2110: Funktionalanalysis (9 C, 6 SWS).....	10280
B.Mat.2120: Funktionentheorie (9 C, 6 SWS).....	10282

Inhaltsverzeichnis

B.Mat.2200: Moderne Geometrie (9 C, 6 SWS).....	10284
B.Mat.2210: Zahlen und Zahlentheorie (9 C, 6 SWS).....	10286
B.Mat.2300: Weiterführung in Numerischer Mathematik (9 C, 6 SWS).....	10288
B.Mat.2310: Optimierung (9 C, 6 SWS).....	10290
B.Mat.2400: Angewandte Statistik (9 C, 6 SWS).....	10292

VIII. Methods of examination and glossary

Methods of examination

As far as in this module handbook a module description is published in the English language the following mapping applies:

Soweit in diesem Modulverzeichnis Modulbeschreibungen in englischer Sprache veröffentlicht werden, gilt für die verwendeten Prüfungsformen nachfolgende Zuordnung:

- Oral examination = mündliche Prüfung [§ 15 Abs. 8 APO]
- Written examination = Klausur [§ 15 Abs. 9 APO]
- Term paper = Hausarbeit [§ 15 Abs. 11 APO]
- Presentation = Präsentation [§ 15 Abs. 12 APO]
- Presentation and written report = Präsentation mit schriftlicher Ausarbeitung [§ 15 Abs. 12 APO]

Glossary

APO = Allgemeinen Prüfungsordnung für Bachelor- und Master-Studiengänge sowie sonstige Studienangebote an der Universität Göttingen

PStO = Prüfungs- und Studienordnung für den Bachelor/Master-Studiengang "Mathematik"

WLH = Weekly lecture hours = SWS

Programme coordinator = Studiengangsbeauftragte/r

Georg-August-Universität Göttingen	10 C
Modul B.Inf.1103: Informatik III	6 SWS
<i>English title: Computer Science III</i>	
Lernziele/Kompetenzen: Erwerb grundlegender Fähigkeiten im Umgang mit den Konzepten der theoretischen Informatik, insbesondere mit dem Verhältnis von Determinismus zu Nichtdeterminismus; Analyse und Entwurfsmethoden für effiziente Algorithmen zu wichtigen Problemstellungen.	Arbeitsaufwand: Präsenzzeit: 84 Stunden Selbststudium: 216 Stunden
Lehrveranstaltung: Informatik III (Vorlesung, Übung)	6 SWS
Prüfung: Klausur (90 Minuten) oder mündliche Prüfung (ca. 20 Min.)	10 C
Prüfungsanforderungen: Effiziente Algorithmen für grundlegende Probleme (z.B. Suchen, Sortieren, Graphalgorithmen), Rekursive Algorithmen, Greedy-Algorithmen, Branch and Bound, Dynamische Programmierung, NP-Vollständigkeit	
Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: B.Inf.1101
Sprache: Deutsch	Modulverantwortliche[r]: Prof. Dr. Stephan Waack
Angebotshäufigkeit: jedes Wintersemester	Dauer: 1 Semester
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester:
Maximale Studierendenzahl: 200	

Georg-August-Universität Göttingen Modul B.Inf.1201: Theoretische Informatik <i>English title: Theoretical Computer Science</i>		5 C 3 SWS
Lernziele/Kompetenzen: Studierende <ul style="list-style-type: none"> • kennen grundlegende Begriffe und Methoden der theoretischen Informatik im Bereich formale Sprachen, Automaten und Berechenbarkeit. • verstehen Zusammenhänge zwischen diesen Gebieten und sowie Querbezüge zur praktischen Informatik. • wenden die klassischen Sätze, Aussagen und Methoden der theoretischen Informatik in typischen Beispielen an. • klassifizieren formale Sprachen nach Chomsky-Typen. • bewerten Probleme hinsichtlich ihrer (Semi-)Entscheidbarkeit. 	Arbeitsaufwand: Präsenzzeit: 42 Stunden Selbststudium: 108 Stunden	
Lehrveranstaltung: Theoretische Informatik (Vorlesung, Übung)		3 SWS
Prüfung: Klausur (90 Minuten) oder mündliche Prüfung (ca. 20 Min.)		5 C
Prüfungsvorleistungen: Bearbeitung von 50% aller Übungsblätter, Vorführung mindestens einer Aufgabe während der Übung, kontinuierliche Teilnahme an den Übungen.		
Prüfungsanforderungen: In der Prüfung wird neben dem theoretischen Verständnis zentraler Begriffe der theoretischen Informatik die aktive Beherrschung der vermittelten Inhalte und Techniken nachgewiesen, z.B. <ul style="list-style-type: none"> • durch Grammatik oder Akzeptormodell gegebene formale Sprache der nachweisbar richtigen Hierarchiestufe zuordnen, für gegebenes Wortproblem einen möglichst effizienten Entscheidungsalgorithmus konstruieren, dessen Laufzeitverhalten analysieren. • aus Grammatik entsprechenden Akzeptor konstruieren (oder umgekehrt), Grammatik in Normalform überführen, reguläre Ausdrücke in endlichen Automaten überführen, Typ3-Grammatik in regulären Ausdruck usw. • Algorithmus in vorgegebener Formalisierung darstellen, einfache Nichtentscheidbarkeitsbeweise durch Reduktion führen oder Abschlusseigenschaften von Sprachklassen herleiten, Semi-Entscheidbarkeit konkreter Probleme nachweisen. 		
Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: B.Inf.1101, B.Mat.0803	
Sprache: Deutsch	Modulverantwortliche[r]: Prof. Dr. Carsten Damm	
Angebotshäufigkeit: jährlich	Dauer: 1 Semester	
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester:	

Maximale Studierendenzahl:	
-----------------------------------	--

100

Georg-August-Universität Göttingen Modul B.Inf.1202: Formale Systeme <i>English title: Formal Systems</i>		5 C 3 SWS
Lernziele/Kompetenzen: Die Studierenden <ul style="list-style-type: none"> • können Sachverhalte in geeigneten logischen Systemen formalisieren und mit diesen Formalisierungen umgehen. • verstehen grundlegende Begriffe und Methoden der mathematischen Logik. • können die Ausdrucksstärke und Grenzen logischer Systeme beurteilen. • beherrschen elementare Darstellungs- und Modellierungstechniken der Informatik, kennen die zugehörigen fundamentalen Algorithmen und können diese anwenden und analysieren. 		Arbeitsaufwand: Präsenzzeit: 42 Stunden Selbststudium: 108 Stunden
Lehrveranstaltung: Formale Systeme (Vorlesung, Übung)		
Prüfung: Klausur (90 Minuten) oder mündliche Prüfung (ca. 20 Min.) Prüfungsvorleistungen: Aktive Teilnahme an den Übungen, belegt durch Nachweis von 50% der in den Übungsaufgaben eines Semesters erreichbaren Punkte.		5 C
Prüfungsanforderungen: <ul style="list-style-type: none"> • Strukturen, Syntax und Semantik von Aussagen- und Prädikatenlogik. • Einführung in weitere Logiken (z.B. Logiken höherer Stufe). • Entscheidbarkeit, Unentscheidbarkeit und Komplexität von logischen Spezifikationen. • Grundlagen zu algebraischen Strukturen und partiell geordneten Mengen. • Syntaxdefinitionen durch Regelsysteme und ihre Anwendung. • Transformation und Analyseverfahren für Regelsysteme. • Einfache Modelle der Nebenläufigkeit (z.B. Petrinetze). 		
Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: B.Inf.1101	
Sprache: Deutsch	Modulverantwortliche[r]: Prof. Dr. Winfried Kurth	
Angebotshäufigkeit: jährlich	Dauer: 1 Semester	
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester:	
Maximale Studierendenzahl: 100		

Georg-August-Universität Göttingen Modul B.Inf.1203: Betriebssysteme English title: <i>Operating Systems</i>	5 C 3 SWS
--	--------------

Lernziele/Kompetenzen: Die Studierenden <ul style="list-style-type: none"> • kennen Aufgaben, Betriebsarten und Struktur eines Betriebssystems. • kennen die Verfahren zu Verwaltung, Scheduling, Kommunikation und Synchronisation von Prozessen und Threads, sie können diese Verfahren jeweils anwenden, analysieren und vergleichen. • kennen die Definition und die Voraussetzungen für Deadlocks, sowie Strategien zur Deadlock-Behandlung und können diese Strategien anwenden, analysieren und vergleichen. • kennen die Unterschiede und den Zusammenhang zwischen logischem, physikalischem und virtuellem Speicher, sie kennen Methoden zur Speicherverwaltung und Verfahren zur Speicherabbildung und können diese anwenden, analysieren und vergleichen. • kennen die Schichtung von Abstraktionsebenen zur Verwaltung von Ein-/Ausgabe-Geräten, sowie verschiedene Ein-/Ausgabe-Hardwareanbindungen. • kennen unterschiedliche Konzepte zur Dateiverwaltung und Verzeichnisimplementierung und können diese anwenden, analysieren und vergleichen. 	Arbeitsaufwand: Präsenzzeit: 42 Stunden Selbststudium: 108 Stunden
--	---

Lehrveranstaltung: Betriebssysteme (Vorlesung, Übung)	3 SWS
Prüfung: Klausur (90 Minuten)	5 C
Prüfungsvorleistungen: Erarbeiten und Vorstellen der Lösung mindestens einer Übungsaufgabe (Präsentation und schriftliche Ausarbeitung), sowie die aktive Teilnahme an den Übungen.	
Prüfungsanforderungen: Aufgaben, Betriebsarten und Struktur eines Betriebssystems; Verwaltung, Scheduling, Kommunikation und Synchronisation von Prozessen und Threads; Deadlocks; Speicherverwaltung; Ein-/Ausgabe; Dateien und Dateisysteme	

Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: B.Inf.1101, B.Inf.1801
Sprache: Deutsch	Modulverantwortliche[r]: Dr. Henrik Brosenne
Angebotshäufigkeit: jährlich	Dauer: 1 Semester
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester:
Maximale Studierendenzahl: 100	

Georg-August-Universität Göttingen Module B.Inf.1204: Telematics / Computer Networks		5 C 3 WLH
Learning outcome, core skills: The students <ul style="list-style-type: none"> • know the core principles and concepts of computer networks. • know the principle of layering and the coherences and differences between the layers of the internet protocol stack. • know the properties of protocols that are used for data forwarding in wired and wireless networks. They are able to analyse and compare these protocols. • know details of the internet protocol. • know the different kinds of routing protocols, both in the intra-domain and inter-domain level. They are able to apply, analyse and compare these protocols. • know the differences between transport layer protocols as well as their commonalities. They are able to use the correct protocol based on the demands of an application. • know the principles of Quality-of-Service infrastructures and networked multimedia • know the basics of both symmetric and asymmetric encryption with regards to network security. They know the various advantages and disadvantages of each kind of encryption when compared to each other and can apply the correct encryption method based on application demands. 		Workload: Attendance time: 42 h Self-study time: 108 h
Course: Computernetworks (Lecture, Exercise)		3 WLH
Examination: Written examination (90 minutes) Examination requirements: Layering; ethernet; forwarding in wired and wireless networks; IPv4 and IPv6; inter-domain and intra-domain routing protocols; transport layer protocols; congestion control; flow control; Quality-of-Service infrastructures; asymmetric and symmetric cryptography		5 C
Admission requirements: none		Recommended previous knowledge: B.Inf.1101, B.Inf.1801
Language: English		Person responsible for module: Prof. Dr. Xiaoming Fu
Course frequency: once a year		Duration: 1 semester[s]
Number of repeat examinations permitted: twice		Recommended semester:
Maximum number of students: 100		

Georg-August-Universität Göttingen	5 C
Modul B.Inf.1206: Datenbanken	3 SWS
<i>English title: Databases</i>	

Lernziele/Kompetenzen: Die Studierenden kennen die theoretischen Grundlagen sowie technischen Konzepte von Datenbanksystemen. Mit den erworbenen Kenntnissen in konzeptueller Modellierung und praktischen Grundkenntnissen in der am weitesten verbreiteten Anfragesprache "SQL" können sie einfache Datenbankprojekte durchführen. Sie wissen, welche grundlegende Funktionalität ihnen ein Datenbanksystem dabei bietet und können diese nutzen. Sie können sich ggf. auf der Basis dieser Kenntnisse mit Hilfe der üblichen Dokumentation in diesem Bereich selbstständig weitergehend einarbeiten. Die Studierenden verstehen den Nutzen eines fundierten mathematisch-theoretischen Hintergrundes auch im Bereich praktischer Informatik.	Arbeitsaufwand: Präsenzzeit: 42 Stunden Selbststudium: 108 Stunden
---	---

Lehrveranstaltung: Datenbanken (Vorlesung, Übung) <i>Inhalte:</i> Konzeptuelle Modellierung (ER-Modell), relationales Modell, relationale Algebra (als theoretische Grundlage der Anfragekonzepte), SQL-Anfragen, -Updates und Schemaerzeugung, Transaktionen, Normalisierungstheorie. Literatur: R. Elmasri, S.B. Navathe: Grundlagen von Datenbanksystemen - Ausgabe Grundstudium (dt. Übers.), Pearson Studium (nach Praxisrelevanz ausgewählte Themen).	3 SWS
Prüfung: Klausur (120 Min.) oder mündliche Prüfung (ca. 20 Min.)	5 C

Prüfungsanforderungen: Nachweis über aufgebaute weiterführende Kompetenzen in den folgenden Bereichen: theoretische Grundlagen sowie technische Konzepte von Datenbanksystemen, konzeptuelle Modellierung und praktische Grundkenntnisse in der am weitesten verbreiteten Anfragesprache "SQL" in ihrer Anwendung auf einfache Datenbankprojekte, Nutzung grundlegender Funktionalitäten von Datenbanksystem, mathematisch-theoretischer Hintergründe in der praktischen Informatik. Fähigkeit, die vorstehenden Kompetenzen weiter zu vertiefen.	
---	--

Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: B.Inf.1101
Sprache: Deutsch	Modulverantwortliche[r]: Prof. Dr. Wolfgang May
Angebotshäufigkeit: jährlich	Dauer: 1 Semester
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester:
Maximale Studierendenzahl: 100	

Georg-August-Universität Göttingen Modul B.Inf.1209: Softwaretechnik English title: <i>Software Engineering</i>	5 C 3 SWS
---	--------------

Lernziele/Kompetenzen: Die Studierenden <ul style="list-style-type: none"> • kennen Geschichte, Definition, Aufgaben und Wissensgebiete der Softwaretechnik. • wissen was ein Softwareprojekt ist, welche Personen und Rollen in Softwareprojekten ausgefüllt werden müssen und wie Softwareprojekte in Unternehmensstrukturen eingebettet werden können. • kennen unterschiedliche Vorgehens- und Prozessmodelle der Softwaretechnik, kennen deren Vor- und Nachteile und wissen wie die Qualität von Softwareentwicklungsprozessen bewertet werden können. • kennen verschiedene Methoden der Kosten- und Aufwandsschätzung für Softwareprojekte. • kennen die Prinzipien und verschiedene Verfahren für die Anforderungsanalyse für Softwareprojekte. • kennen die Prinzipien und mindestens eine Vorgehensweise für den Software Entwurf. • kennen die Prinzipien der Software Implementierung. • kennen die grundlegenden Methoden für die Software Qualitätssicherung. 	Arbeitsaufwand: Präsenzzeit: 42 Stunden Selbststudium: 108 Stunden
--	---

Lehrveranstaltung: Softwaretechnik I (Vorlesung, Übung) Inhalte: Software-Qualitätsmerkmale, Projekte, Vorgehensmodelle, Requirements-Engineering, Machbarkeitsstudie, Analyse, Entwurf, Implementierung, Qualitätssicherung	
--	--

Prüfung: Klausur (90 Minuten) oder mündliche Prüfung (ca. 20 Min.) Prüfungsvorleistungen: Softwaretechnik Prüfungsanforderungen: Definition und Aufgaben der Softwaretechnik, Definition Softwareprojekt, Personen und Rollen in Softwareprojekten, Einbettung von Softwareprojekten in Unternehmensstrukturen, Vorgehens- und Prozessmodelle und deren Bewertung, Aufwands- und Kostenabschätzung, Anforderungsanalyse, Design, Implementierung und Qualitätssicherung	5 C
--	-----

Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: B.Inf.1101, B.Inf.1801, B.Inf.1802

Georg-August-Universität Göttingen Modul B.Mat.0730: Praktikum Wissenschaftliches Rechnen <i>English title: Practical course in scientific computing</i>		9 C 4 SWS
Lernziele/Kompetenzen: Lernziele: <p>Nach erfolgreichem Absolvieren des Moduls besitzen die Studierenden praktische Erfahrungen im wissenschaftlichen Rechnen. Sie</p> <ul style="list-style-type: none"> • erstellen größere Programmierprojekte in Einzel- oder Gruppenarbeit; • erwerben und festigen Programmierkenntnisse; • haben Erfahrungen mit grundlegenden Verfahren zur numerischen Lösung von mathematischen Problemen. Kompetenzen: <p>Nach erfolgreichem Absolvieren des Moduls sind die Studierenden in der Lage,</p> <ul style="list-style-type: none"> • mathematische Algorithmen und Verfahren in einer Programmiersprache oder einem Anwendersystem zu implementieren; • spezielle numerische Bibliotheken zu nutzen; • komplexe Programmieraufgaben so zu strukturieren, dass sie effizient in Gruppenarbeit bewältigt werden können. 	Arbeitsaufwand: Präsenzzeit: 56 Stunden Selbststudium: 214 Stunden	
Lehrveranstaltung: Praktikum Wissenschaftliches Rechnen		4 SWS
Prüfung: Präsentation (ca. 30 Minuten) oder Hausarbeit (max. 50 Seiten ohne Anhänge) Prüfungsvorleistungen: Engagierte Mitarbeit im Praktikum		9 C
Prüfungsanforderungen: <ul style="list-style-type: none"> • Grundkenntnisse der numerischen Mathematik • gute Programmierkenntnisse 		
Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: B.Mat.1300	
Sprache: Deutsch	Modulverantwortliche[r]: Studiengangsbeauftragte(r)	
Angebotshäufigkeit: jedes Semester	Dauer: 1 Semester	
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester: Bachelor: 4 - 6; Master: 1 - 4	
Maximale Studierendenzahl: nicht begrenzt		
Bemerkungen: Dozent/in: Lehrpersonen des Instituts für Numerische und Angewandte Mathematik		

Georg-August-Universität Göttingen Modul B.Mat.0740: Stochastisches Praktikum English title: Practical course in stochastics	9 C 6 SWS
--	--------------

Lernziele/Kompetenzen: Lernziele: Nach erfolgreichem Absolvieren des Moduls sind die Studierenden mit den grundlegenden Eigenschaften und Methoden einer stochastischen Simulations- und Analyse-Software (z.B. "R" oder Matlab) vertraut. Sie haben in Projektarbeit Spezialkenntnisse in Stochastik erworben. Sie <ul style="list-style-type: none"> • implementieren und interpretieren selbstständig einfache stochastische Problemstellungen in einer entsprechenden Software; • schreiben selbstständig einfache Programme in der entsprechenden Software; • beherrschen einige grundlegende Techniken der statistischen Datenanalyse und stochastischen Simulation, wie etwa der deskriptiven Statistik, der linearen, nichtlinearen und logistischen Regression, der Maximum-Likelihood-Schätzmethode, sowie von verschiedenen Testverfahren und Monte-Carlo-Simulationsmethoden. Kompetenzen: Nach erfolgreichem Absolvieren des Moduls sind die Studierenden in der Lage <ul style="list-style-type: none"> • eine stochastische Simulations- und Analyse-Software auf konkrete stochastische Problemstellungen anzuwenden und die erhaltenen Resultate fachgerecht zu präsentieren; • statistische Daten und ihre wichtige Eigenschaften adäquat zu visualisieren und interpretieren. 	Arbeitsaufwand: Präsenzzeit: 84 Stunden Selbststudium: 186 Stunden
---	---

Lehrveranstaltung: Stochastisches Praktikum	6 SWS
--	-------

Prüfung: Präsentation (ca. 45 Minuten) mit schriftlicher Ausarbeitung (max. 50 Seiten ohne Anhänge)	9 C
--	-----

Prüfungsanforderungen: Weiterführende Kenntnisse in Stochastik	
--	--

Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: B.Mat.2400
Sprache: Deutsch	Modulverantwortliche[r]: Studiengangsbeauftragte/r
Angebotshäufigkeit: jedes Sommersemester	Dauer: 1 Semester
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester: Bachelor: 4 - 6; Master: 1 - 4
Maximale Studierendenzahl:	

nicht begrenzt

Bemerkungen:

Dozent/in: Lehrpersonen des Instituts für Mathematische Stochastik

Georg-August-Universität Göttingen	3 C (Anteil SK: 3 C) 2 SWS
Modul B.Mat.0911: Ein Mehrbenutzerbetriebssystem in der Praxis: Einzelbetrieb <i>English title: Working with a multi-user operating system - single user modus</i>	

Lernziele/Kompetenzen: Lernziele: Nach erfolgreichem Absolvieren des Moduls verfügen die Studierenden über fundierte Grundlagenkenntnisse eines Mehrbenutzerbetriebssystems im Einzelbetrieb. Kompetenzen: Nach erfolgreichem Absolvieren des Moduls sind die Studierenden in der Lage <ul style="list-style-type: none"> • mit einem Mehrbenutzerbetriebssystem auf der Ebene einfacher Systemverwaltung im Einzelbetrieb umzugehen; • Skripte zur effektiven Aufgabenbewältigung zu erstellen. 	Arbeitsaufwand: Präsenzzeit: 28 Stunden Selbststudium: 62 Stunden
---	--

Lehrveranstaltung: Vorlesung (Vorlesung) <i>Inhalte:</i> Vorlesung mit Übungen	2 SWS
---	-------

Prüfung: Klausur (90 Minuten), unbenotet Prüfungsvorleistungen: Ein Mehrbenutzerbetriebssystem in der Praxis: Einzelbetrieb	3 C
---	-----

Prüfungsanforderungen: Grundkenntnisse in der Erstellung von Skripten, sicherer Umgang mit und Zuordnung von Begriffen aus einem Mehrbenutzerbetriebssystem im Einzelbetrieb	
--	--

Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: Grundkenntnisse im Umgang mit einem Computer
Sprache: Deutsch, Englisch	Modulverantwortliche[r]: Studiengangsbeauftragte/r
Angebotshäufigkeit: jedes Wintersemester	Dauer: 1 Semester
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester: Bachelor: 1 - 6; Master: 1 - 4; Promotion: 1 - 6
Maximale Studierendenzahl: nicht begrenzt	

Bemerkungen: <ul style="list-style-type: none"> • Dozent/in: Lehrpersonen des Mathematischen Instituts • Schlüsselkompetenz im Bereich "EDV/IKT-Kompetenz (IKT=Informations- und Kommunikationstechnologie)", auch für Studierende anderer Fakultäten. • Nicht verwendbar als Schlüsselkompetenz für Studierende im Zwei-Fächer Bachelor-Studiengang mit Fach Informatik oder im Bachelor/Master-Studiengang "Angewandte Informatik"
--

- Im Bachelor-Studiengang "Angewandte Informatik" verwendbar als Wahlmodul im Bereich der Kerninformatik

Georg-August-Universität Göttingen Modul B.Mat.0912: Ein Mehrbenutzerbetriebssystem in der Praxis: Netzwerkbetrieb <i>English title: Working with a multi-user operating system - network services</i>	3 C (Anteil SK: 3 C) 2 SWS
--	----------------------------------

Lernziele/Kompetenzen: Lernziele: Nach erfolgreichem Absolvieren des Moduls verfügen die Studierenden über fundierte <ul style="list-style-type: none"> • Grundlagenkenntnisse eines Mehrbenutzerbetriebssystems im Netzwerkbetrieb; • theoretische Grundlagen von Netzwerkbetriebssystemen. Kompetenzen: Nach erfolgreichem Absolvieren des Moduls sind die Studierenden in der Lage <ul style="list-style-type: none"> • mit einem Mehrbenutzerbetriebssystem auf der Ebene einfacher Systemverwaltung im Netzwerkbetrieb umzugehen; • Skripte zur effektiven Aufgabenbewältigung zu erstellen; • Netzwerkprotokolle praktisch anzuwenden. Georg-August-Universität Göttingen Modul B.Mat.2100: Partielle Differenzialgleichungen <i>English title: Partial differential equations</i>		9 C 6 SWS
Lernziele/Kompetenzen: Lernziele: <p>Nach erfolgreichem Absolvieren des Moduls sind die Studierenden mit grundlegenden Typen von Differenzialgleichungen und Eigenschaften ihrer Lösungen vertraut. Sie</p> <ul style="list-style-type: none"> • beschreiben grundlegende Eigenschaften von Lösungen der Laplace-, Wärmeleitungs- und Wellengleichung und zugehöriger Rand- bzw. Anfangs-Randwertprobleme; • sind mit grundlegenden Eigenschaften von Fourier-Transformation und Sobolev-Räumen auf beschränkten und unbeschränkten Gebieten vertraut; • analysieren die Lösbarkeit von Randwertproblemen für elliptische Differenzialgleichungen mit variablen Koeffizienten; • analysieren die Regularität von Lösungen elliptischer Randwertprobleme im Inneren und am Rand. Kompetenzen: <p>Nach erfolgreichem Absolvieren des Moduls sind die Studierenden in der Lage,</p> <ul style="list-style-type: none"> • den Typ einer partiellen Differenzialgleichung zu erkennen und auf qualitative Eigenschaften ihrer Lösungen zu schließen; • mathematisch relevante Fragestellungen zu partiellen Differenzialgleichungen zu erkennen; • den Einfluss von Randbedingungen und Funktionenräumen auf Existenz, Eindeutigkeit und Stabilität von Lösungen zu beurteilen. 	Arbeitsaufwand: Präsenzzeit: 84 Stunden Selbststudium: 186 Stunden	
Lehrveranstaltungen: 1. Partielle Differenzialgleichungen (Vorlesung) 4 SWS 2. Partielle Differenzialgleichungen - Übung (Übung) 2 SWS		
Prüfung: Klausur (120 Minuten) Prüfungsvorleistungen: Partielle Differenzialgleichungen		9 C
Prüfungsanforderungen: Nachweis der Grundkenntnisse über partielle Differenzialgleichungen		
Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: B.Mat.0021, B.Mat.0022	
Sprache: Deutsch	Modulverantwortliche[r]: Studiengangsbeauftragte/r	
Angebotshäufigkeit: zweijährig jeweils im Wintersemester	Dauer: 1 Semester	

Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester: 4 - 6
Maximale Studierendenzahl: nicht begrenzt	
Bemerkungen: Dozent/in: Lehrpersonen des Mathematischen Instituts oder des Instituts für Numerische und Angewandte Mathematik	

Georg-August-Universität Göttingen Modul B.Mat.2110: Funktionalanalysis <i>English title: Functional analysis</i>		9 C 6 SWS
Lernziele/Kompetenzen:	Arbeitsaufwand: Lernziele: Nach erfolgreichem Absolvieren des Moduls sind die Studierenden mit funktionalanalytischer Denkweise und den zentralen Resultaten aus diesem Gebiet vertraut. Sie <ul style="list-style-type: none"> • gehen sicher mit den gängigsten Beispielen von Funktionen- und Folgenräumen wie L^p, l^p und Räumen stetiger Funktionen um und analysieren deren funktionalanalytische Eigenschaften; • wenden die grundlegenden Sätze über lineare Operatoren in Banach-Räumen an, insbesondere die Sätze von Banach-Steinhaus, Hahn-Banach und den Satz über die offene Abbildung; • argumentieren mit schwachen Konvergenzbegriffen und den grundlegenden Eigenschaften von Dual- und Bidualräumen; • erkennen Kompaktheit von Operatoren und analysieren die Lösbarkeit linearer Operatorgleichungen mit Hilfe der Riesz-Fredholm-Theorie; • sind mit grundlegenden Begriffen der Spektraltheorie und dem Spektralsatz für beschränkte, selbstadjungierte Operatoren vertraut. Kompetenzen: Nach erfolgreichem Absolvieren des Moduls sind die Studierenden in der Lage, <ul style="list-style-type: none"> • in unendlich-dimensionalen Räumen geometrisch zu argumentieren; • Aufgabenstellungen in funktionalanalytischer Sprache zu formulieren und zu analysieren; • die Relevanz funktionalanalytischer Eigenschaften wie der Wahl eines passenden Funktionenraums, Vollständigkeit, Beschränktheit oder Kompaktheit zu erkennen und zu beschreiben. 	
Lehrveranstaltungen: 1. Funktionalanalysis (Vorlesung) 2. Funktionalanalysis - Übung (Übung)		4 SWS 2 SWS
Prüfung: Klausur (120 Minuten) Prüfungsvorleistungen: Funktionalanalysis		9 C

Georg-August-Universität Göttingen	Module B.Mat.3043: Non-life insurance mathematics	6 C 4 WLH
Learning outcome, core skills:		Workload: Attendance time: 56 h Self-study time: 124 h
Non-life insurance mathematics deals with models and methods of quantifying risks with both, the occurrence of the loss and its amount showing random patterns. In particular the following problems are to be solved:		
<ul style="list-style-type: none"> • determining appropriate insurance premiums; • calculate adequate loss reserves; • determine how to allocate risk between policyholder and insurer resp. insurer and reinsurers. 		
Learning outcome:		
The aim of the module is to equip students with knowledge in four areas:		
<ol style="list-style-type: none"> 1. risk models; 2. pricing; 3. reserving; 4. risk sharing. 		
After having successfully completed the module, students are familiar with fundamental terms and methods of non-life insurance mathematics. They		
<ul style="list-style-type: none"> • are familiar with and able to handle essential definitions and terms within non-life insurance mathematics; • have an overview of the most valuable problem statements of non-life insurance; • understand central aspects of risk theory; • know substantial pricing and reserving methods; • estimate ruin probabilities; • are acquainted with most important reinsurance forms and reinsurance pricing methods. 		
Core skills:		
After having successfully completed the module, students have acquired fundamental competencies within non-life insurance. They are able to		
<ul style="list-style-type: none"> • evaluate and quantify fundamental risks; • model the aggregate loss with individual or collective model; • apply a basic inventory of solving approaches; • analyse and develop pricing models which mathematically are state of the art; • apply different reserving methods and calculate outstanding losses; • assess reinsurance contracts. 		
Course: Lecture course with exercise session		4 WLH
Examination: Written examination (120 minutes)		6 C
Examination prerequisites:		
Non-life insurance mathematics		

Examination requirements: Fundamental knowledge of non-life insurance mathematics	
Admission requirements: none	Recommended previous knowledge: B.Mat.1400
Language: English	Person responsible for module: Programme coordinator
Course frequency: not specified	Duration: 1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester: Bachelor: 4 - 6; Master: 1 - 4
Maximum number of students: not limited	
Additional notes and regulations: Instructor: Lecturers at the Institute of Mathematical Stochastics	

Georg-August-Universität Göttingen Module B.Mat.3044: Life insurance mathematics	6 C 4 WLH
<p>Learning outcome, core skills:</p> <p>This module deals with the basics of different branches in life insurance mathematics. In particular, students get to know both the classical deterministic model and the stochastic model as well as how to apply them to problems relevant in the respective branch. On this base the students describe</p> <ul style="list-style-type: none"> • essential notions of present values; • premiums and their present values; • the actuarial reserve. <p>Learning outcome:</p> <p>After having successfully completed the module, students are familiar with fundamental terms and methods of life insurance mathematics. In particular they</p> <ul style="list-style-type: none"> • assess cashflows in terms of financial and insurance mathematics; • apply methods of life insurance mathematics to problems from theory and practise; • characterise financial securities and insurance contracts in terms of cashflows; • have an overview of the most valuable problem statements of life insurance; • understand the stochastic interest structure; • master fundamental terms and notions of life insurance mathematics; • get an overview of most important problems in life insurance mathematics; • understand mortality tables and leaving orders within pension insurance; • know substantial pricing and reserving methods; • know the economic and legal requirements of private health insurance in Germany; • are acquainted with per-head loss statistics, present value factor calculation and biometric accounting principles. <p>Core skills:</p> <p>After having successfully completed the module, students have acquired fundamental competencies within life insurance. They are able to</p> <ul style="list-style-type: none"> • assess cashflows with respect to both collateral and risk under deterministic interest structure; • calculate premiums and provisions in life-, health- and pension-insurance; • understand the actuarial equivalence principle as base of actuarial valuation in life insurance; • apply and understand the actuarial equivalence principle for calculating premiums, actuarial reserves and ageing provisions; • calculate profit participation in life insurance; • master premium calculation in health insurance; • calculate present value and settlement value of pension obligations; • find mathematical solutions to practical questions in life, health and pension insurance. 	Workload: Attendance time: 56 h Self-study time: 124 h

<p>Georg-August-Universität Göttingen</p> <p>Module B.Mat.3133: Introduction to numerics of partial differential equations</p>	<p>9 C 6 WLH</p>
<p>Learning outcome, core skills:</p> <p>Learning outcome:</p> <p>The successful completion of modules of the cycle "Numerics of partial differential equations" enables students to learn methods, concepts, theories and applications in the area of "Numerics of partial differential equations". During the course of the cycle students will be successively introduced to current research topics and able to carry out independent contributions to research (e. g. within the scope of a practical course in scientific computing or a Master's thesis). Depending on the current course offer the following content-related competencies may be pursued. Students</p> <ul style="list-style-type: none"> • are familiar with the theory of linear partial differential equations, e. g. questions of classification as well as existence, uniqueness and regularity of the solution; • know the basics of the theory of linear integral equations; • are familiar with basic methods for the numerical solution of linear partial differential equations with finite difference methods (FDM), finite element methods (FEM) as well as boundary element methods (BEM); • analyse stability, consistence and convergence of FDM, FEM and BEM for linear problems; • apply methods for adaptive lattice refinement on the basis of a posteriori error approximations; • know methods for the solution of larger systems of linear equations and their preconditioners and parallelisation; • apply methods for the solution of larger systems of linear and stiff ordinary differential equations and are familiar with the problem of differential algebraic problems; • apply available software for the solution of partial differential equations and evaluate the results sceptically; • evaluate different numerical methods on the basis of the quality of the solutions, the complexity and their computing time; • acquire advanced knowledge in the theory as well as development and application of numerical solution strategies in a special area of partial differential equations, e. g. in variation problems with constraints, singularly perturbed problems or of integral equations; • know propositions about the theory of non-linear partial differential equations of monotone and maximally monotone type as well as suitable iterative solution methods. <p>Core skills:</p> <p>After having successfully completed the module, students will be able to</p> <ul style="list-style-type: none"> • discuss basic concepts of the area "Numerics of partial differential equations"; • explain basic ideas of proof in the area "Numerics of partial differential equations"; • illustrate typical applications in the area "Numerics of partial differential equations". 	<p>Workload:</p> <p>Attendance time: 84 h</p> <p>Self-study time: 186 h</p>

Courses:	
1. Lecture course (Lecture)	4 WLH
2. Exercise session (Exercise)	2 WLH
Examination: Written or oral exam, written examination (120 minutes) or oral examination (appr. 20 minutes)	9 C
Examination prerequisites: B.Mat.3133.Ue: Achievement of at least 50% of the exercise points and presentation, twice, of solutions in the exercise sessions	
Examination requirements: Proof of knowledge and mastery of basic competencies in the area "Numerics of partial differential equations"	
Admission requirements: none	Recommended previous knowledge: B.Mat.1300
Language: English	Person responsible for module: Programme coordinator
Course frequency: not specified	Duration: 1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester: Bachelor: 5 - 6; Master: 1 - 4
Maximum number of students: not limited	
Additional notes and regulations: Instructor: Lecturers at the Institute of Numerical and Applied Mathematics	

<p>Georg-August-Universität Göttingen</p> <p>Module B.Mat.3134: Introduction to optimisation</p> <p>Learning outcome, core skills:</p> <p>Learning outcome:</p> <p>The successful completion of modules of the cycle "Optimisation" enables students to learn methods, concepts, theories and applications in the area of "Optimisation", so the discrete and continuous optimisation. During the course of the cycle students will be successively introduced to current research topics and able to carry out independent contributions to research (e. g. within the scope of a practical course in scientific computing or a Master's thesis). Depending on the current course offer the following content-related competencies may be pursued. Students</p> <ul style="list-style-type: none"> • identify optimisation problems in application-oriented problems and formulate these as mathematical programmes; • evaluate the existence and uniqueness of the solution of an optimisation problem; • identify structural characteristics of an optimisation problem, amongst others the existence of a finite candidate set, the structure of the underlying level set; • know which special characteristics of the target function and the constraints (like (virtual) convexity, dc functions) for the development of solution strategies can be utilised; • analyse the complexity of an optimisation problem; • classify a mathematical programme in a class of optimisation problems and know current solution strategies for it; • develop optimisation methods and adapt general methods to special problems; • deduce upper and lower bounds for optimisation problems and understand their meaning; • understand the geometrical structure of an optimisation problem and apply it for solution strategies; • distinguish between proper solution methods, approximation methods with quality guarantee and heuristics and evaluate different methods on the basis of the quality of the found solutions and their computing times; • acquire advanced knowledge in the development of solution strategies on the basis of a special area of optimisation, e. g. integer optimisation, optimisation of networks or convex optimisation; • acquire advanced knowledge for the solution of special optimisation problems of an application-oriented area, e. g. traffic planning or location planning; • handle advanced optimisation problems, like e. g. optimisation problems with uncertainty or multi-criteria optimisation problems. <p>Core skills:</p> <p>After having successfully completed the module, students will be able to</p> <ul style="list-style-type: none"> • discuss basic concepts of the area "Optimisation"; • explain basic ideas of proof in the area "Optimisation"; • illustrate typical applications in the area "Optimisation". 	<p>9 C</p> <p>6 WLH</p> <p>Workload:</p> <p>Attendance time: 84 h</p> <p>Self-study time: 186 h</p>

Georg-August-Universität Göttingen Module B.Mat.3137: Introduction to variational analysis	9 C 6 WLH
<p>Learning outcome, core skills:</p> <p>Learning outcome:</p> <p>The successful completion of modules of the cycle "Variational analysis" enables students to learn methods, concepts, theories and applications in variational analysis and continuous optimisation. During the course of the cycle students will be successively introduced to current research topics and able to carry out independent contributions to research (e. g. within the scope of a practical course in scientific computing or a Master's thesis). Depending on the current course offer the following content-related competencies may be pursued. Students</p> <ul style="list-style-type: none"> • understand basic concepts of convex and variational analysis for finite- and infinite-dimensional problems; • master the characteristics of convexity and other concepts of the regularity of sets and functions to evaluate the existence and regularity of the solutions of variational problems; • understand basic concepts of the convergence of sets and continuity of set-valued functions; • understand basic concepts of variational geometry; • calculate and use generalised derivations (subderivatives and subgradients) of non-smooth functions; • understand the different concepts of regularity of set-valued functions and their effects on the calculation rules for subderivatives of non-convex functionals; • analyse constrained and parametric optimisation problems with the help of duality theory; • calculate and use the Legendre-Fenchel transformation and infimal convolutions; • formulate optimality criteria for continuous optimisation problems with tools of convex and variational analysis; • apply tools of convex and variational analysis to solve generalised inclusions that e. g. originate from first-order optimality criteria; • understand the connection between convex functions and monotone operators; • examine the convergence of fixed point iterations with the help of the theory of monotone operators; • deduce methods for the solution of smooth and non-smooth continuous constrained optimisation problems and analyse their convergence; • apply numerical methods for the solution of smooth and non-smooth continuous constrained programs to current problems; • model application problems with variational inequations, analyse their characteristics and are familiar with numerical methods for the solution of variational inequations; • know applications of control theory and apply methods of dynamic programming; • use tools of variational analysis in image processing and with inverse problems; • know basic concepts and methods of stochastic optimisation. <p>Core skills:</p>	<p>Workload:</p> <p>Attendance time: 84 h</p> <p>Self-study time: 186 h</p>

After having successfully completed the module, students will be able to

- discuss basic concepts of the area "Variational analysis";
- explain basic ideas of proof in the area "Variational analysis";
- illustrate typical applications in the area "Variational analysis".

Courses:

- 1. Lecture course** (Lecture)
2. Exercise session (Exercise)

4 WLH
2 WLH

Examination: Written or oral exam, written examination (120 minutes) or oral examination (appr. 20 minutes) (120 minutes)

9 C

Examination prerequisites:

B.Mat.3137.Ue: Achievement of at least 50% of the exercise points and presentation, twice, of solutions in the exercise sessions

Examination requirements:

Proof of knowledge and mastery of basic competencies in the area "Variational analysis"

Admission requirements: none	Recommended previous knowledge: B.Mat.1300
Language: English	Person responsible for module: Programme coordinator
Course frequency: not specified	Duration: 1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester: Bachelor: 5 - 6; Master: 1 - 4
Maximum number of students: not limited	

Additional notes and regulations:

Instructor: Lecturers at the Institute of Numerical and Applied Mathematics

<p>Georg-August-Universität Göttingen</p> <p>Module B.Mat.3138: Introduction to image and geometry processing</p> <p>Learning outcome, core skills:</p> <p>Learning outcome:</p> <p>The successful completion of modules of the cycle "Image and geometry processing" enables students to learn and apply methods, concepts, theories and applications in the area of "Image and geometry processing", so the digital image and geometry processing. During the course of the cycle students will be successively introduced to current research topics and able to carry out independent contributions to research (e.g. within the scope of a practical course in scientific computing or a Master's thesis). Depending on the current course offer the following content-related competencies may be pursued. Students</p> <ul style="list-style-type: none"> • are familiar with the modelling of problems of image and geometry processing in suitable finite- and infinite-dimensional vector spaces; • learn basic methods for the analysis of one- and multidimensional functions in Banach and Hilbert spaces; • learn basic mathematical concepts and methods that are used in image processing, like Fourier and Wavelet transform; • learn basic mathematical concepts and methods that play a central role in geometry processing, like curvature of curves and surfaces; • acquire knowledge about continuous and discrete problems of image data analysis and their corresponding solution strategies; • know basic concepts and methods of topology; • are familiar with visualisation software; • apply available software for the solution of the corresponding numerical methods and evaluate the results sceptically; • know which special characteristics of an image or of a geometry can be extracted and worked on with which methods; • evaluate different numerical methods for the efficient analysis of multidimensional data on the basis of the quality of the solutions, the complexity and their computing time; • acquire advanced knowledge about linear and non-linear methods for the geometrical and topological analysis of multidimensional data; • are informed about current developments of efficient geometrical and topological data analysis; • adapt solution strategies for the data analysis using special structural characteristics of the given multidimensional data. <p>Core skills:</p> <p>After having successfully completed the module, students will be able to</p> <ul style="list-style-type: none"> • discuss basic concepts of the area "Image and geometry processing"; • explain basic ideas of proof in the area "Image and geometry processing"; • illustrate typical applications in the area "Image and geometry processing". 	<p>9 C 6 WLH</p> <p>Workload:</p> <p>Attendance time: 84 h</p> <p>Self-study time: 186 h</p>

Examination: Oral examination (approx. 20 minutes) Examination prerequisites: B.Mat.3345.Ue: Achievement of at least 50% of the exercise points and presentation, twice, of solutions in the exercise sessions		9 C
Examination requirements: Proof of advancement of knowledge and competencies acquired in the introductory module of the area "Statistical modelling and inference"		
Admission requirements: none	Recommended previous knowledge: B.Mat.3145	
Language:	Person responsible for module:	

English	Programme coordinator
Course frequency: Usually subsequent to the module B.Mat.3111 "Introduction to statistical modelling and inference"	Duration: 1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester: Bachelor: 6; Master: 1 - 4
Maximum number of students: not limited	
Additional notes and regulations: Instructor: Lecturers at the Institute of Mathematical Stochastics	

Georg-August-Universität Göttingen	Module B.Mat.3346: Advances in multivariate statistics	9 C 6 WLH
<p>Learning outcome, core skills:</p> <p>Learning outcome:</p> <p>The successful completion of modules of the cycle "Multivariate statistics" enables students to learn methods, concepts, theories and applications in this area. During the course of the cycle students will be successively introduced to current research topics and able to carry out independent contributions to research (e. g. within the scope of a Master's thesis). Depending on the current course offer the following content-related competencies may be pursued. Students</p> <ul style="list-style-type: none"> • are familiar with basic principles of statistic modelling as well as estimate and test theory; • understand the basics of multivariate statistics; • know the main features of the theory of empirical processes; • master basic methods of multivariate extreme value theory; • understand the relevance of dependencies in multivariate statistics like e. g. modelled by copulas; • are familiar with basic principles of modelling, estimate and test methods for data on non-standard spaces; • are especially familiar with concepts and methods of directional analysis and statistical shape analysis; • apply statistical methods for data on manifolds and stratified spaces; • are familiar with the relevant statistics of random matrices as well as their eigenvalues and eigenvectors for this purpose. <p>Core skills:</p> <p>After having successfully completed the module, students will be able to</p> <ul style="list-style-type: none"> • handle methods and concepts of the area "Multivariate statistics" confidently; • explain complex issues of the area "Multivariate statistics"; • apply methods of the area "Multivariate statistics" to new problems in this area. 	Workload: Attendance time: 84 h Self-study time: 186 h	
<p>Courses:</p> <p>1. Lecture course (Lecture)</p> <p>2. Exercise session (Exercise)</p>		4 WLH 2 WLH
<p>Examination: Oral examination (approx. 20 minutes)</p> <p>Examination prerequisites:</p> <p>B.Mat.3346.Ue: Achievement of at least 50% of the exercise points and presentation, twice, of solutions in the exercise sessions</p>		9 C

Georg-August-Universität Göttingen Modul B.Phi.01: Basismodul Theoretische Philosophie <i>English title: Basic Studies in Theoretical Philosophy</i>		9 C 4 SWS
Lernziele/Kompetenzen: 1. In einem Einführungskurs (Vorlesung oder Einführungsseminar) erwerben die Studierenden Kenntnis zentraler Themen, Grundbegriffe und Theorieansätze der Theoretischen Philosophie in ihren Disziplinen Erkenntnistheorie, Wissenschaftsphilosophie, Sprachphilosophie oder Metaphysik. 2. In einem Proseminar erlangen die Studierenden grundlegende Fähigkeiten, sich mit Sachfragen der theoretischen Philosophie begrifflich präzise und argumentativ auseinanderzusetzen, insbesondere: ausgewählte Problembereiche und systematische Überlegungen der theoretischen Philosophie adäquat darzustellen, Argumentationen zu analysieren und auf elementarem Niveau in mündlicher und schriftlicher Form zu diskutieren.	Arbeitsaufwand: Präsenzzeit: 56 Stunden Selbststudium: 214 Stunden	
Lehrveranstaltungen: 1. Einführungskurs in die theoretische Philosophie (Vorlesung, Seminar) 2. Proseminar zur theoretischen Philosophie Es muss eine der nachfolgenden Prüfungsformen (Klausur, Hausarbeit oder Essays) absolviert werden. Angebotshäufigkeit: Einführungskurs bevorzugt im Wintersemester	2 SWS 2 SWS	
Prüfung: Hausarbeit (max. 15 Seiten) Prüfungsvorleistungen: regelmäßige Teilnahme an einem Proseminar; kleinere schriftliche Leistungen (max. 2 S.; Protokoll, Kurzreferat o.ä.) in beiden Lehrveranstaltungen	9 C	
Prüfung: Klausur (120 Minuten) Prüfungsvorleistungen: regelmäßige Teilnahme an einem Proseminar; kleinere schriftliche Leistungen (max. 2 S.; Protokoll, Kurzreferat o.ä.) in beiden Lehrveranstaltungen	9 C	
Prüfung: Essay (max. 15 Seiten) Prüfungsvorleistungen: regelmäßige Teilnahme an einem Proseminar; kleinere schriftliche Leistungen (max. 2 S.; Protokoll, Kurzreferat o.ä.) in beiden Lehrveranstaltungen	9 C	
Prüfungsanforderungen: Verständnis zentraler Begriffe, Probleme und Theorieansätze der theoretischen Philosophie. Darstellung und Diskussion von Themen der theoretischen Philosophie auf elementarem Niveau in schriftlicher Form. Die Prüfung wird in einem Proseminar (nicht in der Einführungsvorlesung oder dem Einführungsseminar!) abgelegt.		

Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: keine
Sprache: Deutsch	Modulverantwortliche[r]: Prof. Dr. Christian Beyer
Angebotshäufigkeit: jedes Semester; Einführungskurs bevorzugt im Wintersemester	Dauer: 1 Semester
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester: 1 - 3
Maximale Studierendenzahl: 100	

Georg-August-Universität Göttingen Modul B.Phi.02: Basismodul Praktische Philosophie <i>English title: Basic Studies in Practical Philosophy</i>	9 C 4 SWS
Lernziele/Kompetenzen: 1. In einem Einführungskurs (Vorlesung oder Einführungsseminar) erwerben die Studierenden Kenntnis zentraler Probleme, Grundbegriffe und Theorieansätze der Praktischen Philosophie. Sie überschauen die Teilgebiete, kennen typische Themen und Terminologien sowie einige der wichtigsten Theorieansätze in Grundzügen. 2. In einem Proseminar (Basisseminar) erlangen die Studierenden grundlegende Fähigkeiten, sich mit Sachfragen der Praktischen Philosophie begrifflich präzise und argumentativ auseinander zu setzen, insbesondere: Grundprobleme und -positionen adäquat darzustellen, ethische Argumentationen zu analysieren und auf elementarem Niveau in mündlicher und schriftlicher Form zu diskutieren.	Arbeitsaufwand: Präsenzzeit: 56 Stunden Selbststudium: 214 Stunden
Lehrveranstaltungen: 1. Einführungskurs in die Praktische Philosophie (Vorlesung, Seminar) Angebotshäufigkeit: Einführungskurs bevorzugt im Wintersemester 2. Proseminar zur Praktischen Philosophie	2 SWS 2 SWS
Es muss eine der nachfolgenden Prüfungsformen (Klausur, Hausarbeit oder Essays) absolviert werden. Angebotshäufigkeit: Einführungskurs bevorzugt im Wintersemester	
Prüfung: Essay (max. 15 Seiten) Prüfungsvorleistungen: regelmäßige Teilnahme an einem Proseminar; kleinere schriftliche Leistungen (max. 2 S.; Protokoll, Kurzreferat o.ä.) in beiden Lehrveranstaltungen	9 C
Prüfung: Hausarbeit (max. 15 Seiten) Prüfungsvorleistungen: regelmäßige Teilnahme an einem Proseminar; kleinere schriftliche Leistungen (max. 2 S.; Protokoll, Kurzreferat o.ä.) in beiden Lehrveranstaltungen	9 C
Prüfung: Klausur (120 Minuten) Prüfungsvorleistungen: regelmäßige Teilnahme an einem Proseminar; kleinere schriftliche Leistungen (max. 2 S.; Protokoll, Kurzreferat o.ä.) in beiden Lehrveranstaltungen	9 C

Angebotshäufigkeit: jedes Semester	Dauer: 1 Semester
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester: 1 - 3
Maximale Studierendenzahl: 100	

Georg-August-Universität Göttingen Modul B.Phi.03: Basismodul Geschichte der Philosophie <i>English title: Basic Studies in History of Philosophy</i>		9 C 4 SWS
Lernziele/Kompetenzen: 1. In einem Einführungskurs (Vorlesung oder Einführungsseminar) erwerben die Studierenden einen Überblick über Epochen der Philosophiegeschichte, erste Bekanntschaft mit jeweils zentralen Themenbereichen und einzelnen Werken klassischer Autoren. 2. In einem Proseminar (Basisseminar) erlangen die Studierenden Verständnis klassischer Texte der Philosophie sowie Grundfertigkeiten der Analyse eines Textes unter historischen und systematischen Gesichtspunkten.		Arbeitsaufwand: Präsenzzeit: 56 Stunden Selbststudium: 214 Stunden
Lehrveranstaltungen: 1. Einführungskurs in die Geschichte der Philosophie (Vorlesung, Seminar) 2. Proseminar zur Geschichte der Philosophie		2 SWS 2 SWS
Es muss eine der nachfolgenden Prüfungsformen (Klausur, Hausarbeit oder Essays) absolviert werden.		
Prüfung: Klausur (120 Minuten) Prüfungsvorleistungen: regelmäßige Teilnahme an einem Proseminar; kleinere schriftliche Leistungen (max. 2 S.; Protokoll, Kurzreferat o.ä.) in beiden Lehrveranstaltungen		9 C
Prüfung: Essay (max. 15 Seiten) Prüfungsvorleistungen: regelmäßige Teilnahme an einem Proseminar; kleinere schriftliche Leistungen (max. 2 S.; Protokoll, Kurzreferat o.ä.) in beiden Lehrveranstaltungen		9 C
Prüfung: Hausarbeit (max. 15 Seiten) Prüfungsvorleistungen: regelmäßige Teilnahme an einem Proseminar; kleinere schriftliche Leistungen (max. 2 S.; Protokoll, Kurzreferat o.ä.) in beiden Lehrveranstaltungen		9 C
Prüfungsanforderungen: Überblick über Epochen der Philosophiegeschichte, elementares Verständnis zentraler Themen und klassischer philosophischer Texte. Darstellung und Diskussion philosophiegeschichtlicher Themen auf elementarem Niveau in schriftlicher Form. Die Prüfung wird in einem Proseminar (nicht in der Einführungsvorlesung oder im Einführungsseminar!) abgelegt.		
Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: keine	
Sprache:	Modulverantwortliche[r]:	

Deutsch	Prof. Dr. Bernd Ludwig
Angebotshäufigkeit: jedes Semester; Einführungskurs bevorzugt im SoSe	Dauer: 1 Semester
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester: 2 - 3

Georg-August-Universität Göttingen Modul B.Phys.1551: Einführung in die Astrophysik English title: <i>Introduction to Astrophysics</i>	8 C 6 SWS
Lernziele/Kompetenzen: Nach erfolgreichem Absolvieren des Moduls sollten die Studierenden mit den grundlegenden Begriffen und Modellen der Astrophysik umgehen können. Die angestrebten Kompetenzen umfassen sowohl Grundlagen der Theorie als auch der Beobachtungstechniken.	Arbeitsaufwand: Präsenzzeit: 84 Stunden Selbststudium: 156 Stunden
Lehrveranstaltung: Vorlesung und Übung zu Einführung in die Astrophysik	
Prüfung: Klausur (120 Minuten) Prüfungsvorleistungen: Einführung in die Astrophysik	8 C
Prüfungsanforderungen: Beobachtungstechniken, Planeten in- und außerhalb des Sonnensystems, Planetenentstehung, Sternaufbau, Sternentstehung und -entwicklung, Galaxien, AGN und Quasare, Kosmologie, Strukturentstehung.	
Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: keine
Sprache: Deutsch	Modulverantwortliche[r]: Prof. Dr. Wolfram Kollatschny
Angebotshäufigkeit: jedes Wintersemester	Dauer: 1 Semester
Wiederholbarkeit: dreimalig	Empfohlenes Fachsemester: Bachelor: 5 - 6; Master: 1
Maximale Studierendenzahl: 120	

Georg-August-Universität Göttingen	6 C
Modul B.WIWI-BWL.0014: Rechnungslegung der Unternehmung	4 SWS
<i>English title: Financial Accounting</i>	
Lernziele/Kompetenzen: Gegenstand der Veranstaltung ist die Vermittlung der Grundlagen externer Rechnungslegung nach Maßgabe handelsrechtlicher und internationaler Vorschriften (International Financial Reporting Standards (IFRS)). Studierende sollen nach erfolgreichem Besuch der Veranstaltung Kenntnis der Grundzüge handelsrechtlicher und internationaler Rechnungslegung haben, markante Unterschiede und grundlegende Entwicklungslinien kennen und in der Lage sein, die entsprechenden Rechenwerke zu lesen und für analytische, entscheidungsunterstützende Zwecke zu verwenden.	Arbeitsaufwand: Präsenzzeit: 56 Stunden Selbststudium: 124 Stunden
Lehrveranstaltungen: 1. Rechnungslegung der Unternehmung (Vorlesung) 2. Rechnungslegung der Unternehmung (Übung)	2 SWS 2 SWS
Prüfung: Klausur (90 Minuten)	6 C
Prüfungsanforderungen: Nachweis der Kenntnis der Grundlagen der Rechnungslegung nach handelsrechtlichen Grundsätzen und nach International Financial Reporting Standards im Spannungsfeld nationaler Institutionen und internationaler Konvergenzbestrebungen	
Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: Modul "Jahresabschluss"
Sprache: Deutsch	Modulverantwortliche[r]: Prof. Dr. Jörg-Markus Hitz
Angebotshäufigkeit: jedes Sommersemester	Dauer: 1 Semester
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester: 3 - 4
Maximale Studierendenzahl: nicht begrenzt	

Georg-August-Universität Göttingen Modul B.WIWI-BWL.0038: Supply Chain Management <i>English title: Supply Chain Management</i>		6 C 2 SWS
Lernziele/Kompetenzen:	Arbeitsaufwand: Präsenzzeit: 28 Stunden Selbststudium: 152 Stunden	
<ul style="list-style-type: none"> · Grundlagen des Supply Chain Managements · Standortplanung · Prognose der Nachfrage · Bestellmengenplanung · Koordination der Supply Chain · Technologische Voraussetzungen <p>Die Studierenden sollen in der Lage sein, Instrumente, mit denen Distributionsaufgaben von Industrie- und Handelsunternehmen gelöst und koordiniert werden, anzuwenden, zu beurteilen und bei Bedarf anzupassen. Hierzu zählen insbesondere die gemeinsame Prognose der Nachfrage sowie die koordinierte Bestell- und Bestandspolitik von Handel und Industrie.</p>		
Lehrveranstaltung: Supply Chain Management (Vorlesung)		2 SWS
Prüfung: Klausur (90 Minuten)		6 C
Prüfungsanforderungen: Nachweis von Fähigkeiten, Probleme der wirtschaftsstufenübergreifenden Koordination von Beschaffungs- und Distributionsproblemen zu analysieren. Beherrschung von Instrumenten, mit denen insbesondere die Schnittstellen zwischen Industrie und Handel abgestimmt werden. Kritische Diskussion der Ergebnisse solcher Instrumente.		
Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: Modul "Beschaffung und Absatz"	
Sprache: Deutsch	Modulverantwortliche[r]: Prof. Dr. Waldemar Toporowski	
Angebotshäufigkeit: jedes Sommersemester	Dauer: 1 Semester	
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester: 4 - 6	
Maximale Studierendenzahl: nicht begrenzt		

Georg-August-Universität Göttingen Modul B.WIWI-VWL.0001: Mikroökonomik II <i>English title: Microeconomics II</i>	6 C 4 SWS
Lernziele/Kompetenzen: In dieser Veranstaltung wird das Verständnis der Funktionsweisen verschiedener Marktformen vermittelt und auf deren unterschiedliche Wohlfahrtswirkungen eingegangen. Weiterhin wird das Funktionieren einer Ökonomie untersucht, in der mehrere Märkte gleichzeitig geräumt werden. Darüberhinaus werden spieltheoretische und informationsökonomische Grundlagen vermittelt. Die Studierenden <ul style="list-style-type: none">- kennen die Funktion von Preisen in einer Marktwirtschaft,- kennen die Funktionsweise von Märkten unter Berücksichtigung verschiedener Marktformen,- kennen die Grundlagen der Anwendung mikroökonomischer Analysemethoden auf strategisches Verhalten (Spieltheorie),- kennen Grundlagen der Informationsökonomik.	Arbeitsaufwand: Präsenzzeit: 56 Stunden Selbststudium: 124 Stunden
Lehrveranstaltungen: 1. Mikroökonomik II (Vorlesung) 2. Mikroökonomik II (Übung) Inhalte: (Im Rahmen der Übung werden die Inhalte der Vorlesung verfestigt.)	2 SWS 2 SWS
Prüfung: Klausur (90 Minuten)	6 C
Prüfungsanforderungen: Nachweis grundlegender Kenntnisse der Theorie vom Wettbewerbsgleichgewicht (insb. die Funktion der Preise bei der Markträumung), der Theorie des allgemeinen Konkurrenzgleichgewichts, der Theorie von Marktungleichgewichten (insb. der staatlichen Einflussnahme auf die Marktpreisbildung), verschiedener Marktformen (Monopol, Oligopol) und deren Bedeutung für die Marktprozesse, der Spieltheorie und der Informationsökonomik mittels der Bearbeitung von Rechen- und Multiple-Choice Aufgaben, wobei auch Faktenwissen gefragt ist.	
Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: Modul "Mikroökonomik I"
Sprache: Deutsch	Modulverantwortliche[r]: Prof. Dr. Robert Schwager Prof. Dr. Claudia Keser
Angebotshäufigkeit: jedes Semester	Dauer: 1 Semester

Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester: 2 - 6
Maximale Studierendenzahl: nicht begrenzt	

Georg-August-Universität Göttingen Modul B.WIWI-VWL.0002: Makroökonomik II English title: Macroeconomics II	6 C 4 SWS
---	--------------

Lernziele/Kompetenzen: Die Vorlesung vertieft den Stoff des Moduls Makroökonomische Theorie I durch die Berücksichtigung verschiedener Erweiterungen. Einen Schwerpunkt bildet dabei die Diskussion arbeitsmarkttheoretischer Zusammenhänge, die in bekannte gesamtwirtschaftliche Modelle einbezogen werden, um kurz- und langfristige Wirkungen wirtschaftlicher Maßnahmen unterscheiden zu können. Weitere Schwerpunkte sind die Analyse von Wirtschaftswachstum sowie mikroökonomischer Fundierungen makroökonomischer Annahmen. Schließlich werden wirtschaftspolitische Maßnahmen in offenen Volkswirtschaften im klassischen und keynesianischen Kontext analysiert und deren Wirkung in verschiedenen Währungssystemen diskutiert. Aus diesen Überlegungen werden Aussagen über die Geeignetheit verschiedener Währungssysteme abgeleitet, wobei auch auf die Europäische Währungsunion eingegangen wird. Die Studierenden <ul style="list-style-type: none">- Verstehen die Zusammenhänge auf Arbeitsmärkten, kennen die Determinanten von Arbeitsangebot und Arbeitsnachfrage und können ein Arbeitsmarktgleichgewicht darstellen.- Sind in der Lage, bekannte gesamtwirtschaftliche Modelle durch die arbeitsmarkttheoretischen Erkenntnisse zu erweitern und dadurch lang- und kurzfristige Wirkungen wirtschaftspolitischer Maßnahmen zu unterscheiden.- Können die Zusammenhänge zwischen Inflation und Arbeitslosigkeit anhand der Phillips-Kurve darstellen und diese kritisch reflektieren.- Sind mit verschiedenen Wachstumsmodellen vertraut und kennen die Bedeutung von Wachstum für eine Volkswirtschaft.- Sind in der Lage, ein gesamtwirtschaftliches Modell durch die Beziehungen zum Ausland zu erweitern und anhand dieses Modells die Wirkung verschiedener wirtschaftspolitischer Maßnahmen zu diskutieren.- Kennen die Eigenschaften verschiedener Währungssysteme und können deren Vor- und Nachteile unter Einbeziehung ihres Einflusses auf die Wirkung wirtschaftspolitischer Maßnahmen beurteilen. Im Rahmen der begleitenden Übung/Tutorium vertiefen die Studierenden die Kenntnisse aus der Vorlesung anhand ausgewählter theoretischer Fragestellungen.	Arbeitsaufwand: Präsenzzeit: 56 Stunden Selbststudium: 124 Stunden
---	---

Lehrveranstaltungen: 1. Makroökonomik II (Vorlesung) 2. Makroökonomik II (Übung)	2 SWS 2 SWS
---	----------------

Prüfung: Klausur (90 Minuten)	6 C
Prüfungsanforderungen: Nachweis von Kenntnissen über arbeitsmarkttheoretische Zusammenhänge und den Modifikationen gesamtwirtschaftlicher Modelle durch deren Berücksichtigung. Nachweis der Kenntnis und souveränen Handhabung neoklassischer und keynesianischer Gütermarkt-Hypothesen. Die Studierenden sind in der Lage, die Zusammenhänge zwischen Inflation und Arbeitslosigkeit zu begründen, theoretisch darzustellen und zu diskutieren. Außerdem kennen sie Wachstumsmodelle und deren Bedeutung für die Volkswirtschaften. Nachweis von Kenntnissen über die Wirkungsweise verschiedener Währungssysteme und einer Währungsunion. Nachweis der Kenntnis und souveränen Anwendung des Mundell-Fleming-Modells zur Analyse der Wirkungen verschiedener wirtschaftspolitischer Maßnahmen für eine offene Volkswirtschaft bei unterschiedlichen Wechselkurssystemen.	
Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: Modul "Makroökonomik I"
Sprache: Deutsch	Modulverantwortliche[r]: Prof. Dr. Renate Ohr Prof. Dr. Gerhard Rübel; Prof. Stephan Klasen, Ph.D.
Angebotshäufigkeit: jedes Semester	Dauer: 1 Semester
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester: 2 - 6
Maximale Studierendenzahl: nicht begrenzt	

<p>Georg-August-Universität Göttingen</p> <p>Modul B.WIWI-VWL.0005: Grundlagen der internationalen Wirtschaftsbeziehungen</p> <p><i>English title: International Economics Foundations</i></p>	<p>6 C 4 SWS</p>
<p>Lernziele/Kompetenzen:</p> <p>Die Vorlesung besteht aus drei Teilen. In Teil 1 werden die Erfassung außenwirtschaftlicher Beziehungen einer Volkswirtschaft und die Gründe der Entstehung von dabei auftretenden Ungleichgewichten analysiert. Dabei wird auch die gesellschaftliche Bedeutung solcher Ungleichgewichte und Möglichkeiten ihres Abbaus diskutiert. Teil 2 gibt einen Überblick über die Ursachen und die Folgen der internationalen Arbeitsteilung. Dabei werden verschiedene Theorien analysiert und deren volkswirtschaftlichen Konsequenzen dargestellt. Auch die Gründe, die Möglichkeiten und die Folgen staatlicher Eingriffe in die Weltmarktpreisbildung werden analysiert. In Teil 3 werden die verschiedenen Erscheinungsformen von Devisenmärkten und die dort praktizierten Geschäfte untersucht und die Bestimmungsfaktoren von Wechselkursen diskutiert und theoretisch vertieft.</p> <p>Die Studierenden</p> <ol style="list-style-type: none"> 1. Sind mit der Erfassung außenwirtschaftlicher Beziehungen einer Volkswirtschaft vertraut, kennen möglich Ursachen für die Entstehung von Ungleichgewichten und können deren Bedeutung für nationale Volkswirtschaften und für die Welt als Ganzes kritisch reflektieren. 2. Kennen verschiedene Ursachen für die Teilnahme eines Landes an der internationalen Arbeitsteilung 3. Können verschiedene Ursachen für den relativen Preisvorteil eines Landes theoretisch fundieren und deren wirtschaftspolitische Konsequenzen darstellen 4. Sind mit den Wohlfahrtswirkungen von Außenhandel vertraut und können deren gesellschaftlichen Folgen reflektieren 5. Kennen mögliche staatliche Instrumente zur Beeinflussung von Import- und Exporten und können die sich daraus ergebenden gesellschaftlichen Konsequenzen einzelstaatlich und weltwirtschaftlich bewerten 6. Sind mit den Voraussetzungen und den Motiven einer multinationalen Unternehmertätigkeit vertraut 7. Haben einen Überblick über die verschiedenen Erscheinungsformen von Devisenmärkten und den Motiven der dort handelnden Akteure und können die dabei bestehenden Zusammenhänge darstellen 8. Sind vertraut mit verschiedenen Determinanten von Wechselkursen und können deren Relevanz kritisch reflektieren 	<p>Arbeitsaufwand:</p> <p>Präsenzzeit: 56 Stunden</p> <p>Selbststudium: 124 Stunden</p>

Im Rahmen der begleitenden Übung vertiefen die Studierenden die Kenntnisse aus der Vorlesung anhand ausgewählter theoretischer Fragestellungen.

Lehrveranstaltungen:

1. Grundlagen der internationalen Wirtschaftsbeziehungen (Vorlesung)

2 SWS

2. Grundlagen der internationalen Wirtschaftsbeziehungen (Übung)

2 SWS

Prüfung: Klausur (90 Minuten)

6 C

Prüfungsanforderungen:

Nachweis von Kenntnissen über die Erfassung außenwirtschaftlicher Beziehungen einer Volkswirtschaft, den Ursachen dabei entstehender Ungleichgewichte und deren wirtschaftspolitischen Folgen. Kenntnisse über die Gründe der internationalen Arbeitsteilung, den Theorien zur Bestimmung relativer Preisvorteile eines Landes und den Folgen der internationalen Arbeitsteilung. Grundlegende Kenntnisse staatlicher Einflüsse auf die Weltmärkte und der Ursachen und Wirkung einer international orientierten Unternehmertätigkeit. Kenntnisse über die Erscheinungsformen von Devisenmärkten und die dort praktizierten Geschäfte sowie der Bestimmungsfaktoren von Wechselkursen.

Zugangsvoraussetzungen:

keine

Empfohlene Vorkenntnisse:

Modul "Makroökonomik I", Modul "Mikroökonomik I"

Sprache:

Deutsch

Modulverantwortliche[r]:

Prof. Dr. Gerhard Rübel

Angebotshäufigkeit:

jedes Wintersemester

Dauer:

1 Semester

Wiederholbarkeit:

Empfohlenes Fachsemester:

3 - 6

Maximale Studierendenzahl:

nicht begrenzt

Georg-August-Universität Göttingen Modul B.WIWI-VWL.0006: Wachstum und Entwicklung <i>English title: Economic Growth and Development</i>	6 C 4 SWS
Lernziele/Kompetenzen: Nach dem erfolgreichen Besuch des Moduls, - haben die Studierenden Kenntnisse über die historische Entwicklung von Einkommensunterschieden, - können mit Modellen der Wachstumstheorie arbeiten, - sind in der Lage, Wachstumsmodelle empirisch zu überprüfen, - können wirtschaftspolitische Implikationen aus den Ergebnissen ziehen und diese kritisch reflektieren	Arbeitsaufwand: Präsenzzeit: 56 Stunden Selbststudium: 124 Stunden
Lehrveranstaltungen: 1. Wachstum und Entwicklung (Vorlesung) 2. Wachstum und Entwicklung (Übung)	2 SWS 2 SWS
Prüfung: Klausur (90 Minuten) Prüfungsanforderungen: Historische Entwicklung der Einkommensunterschiede; Harrod-Domar Modell; Solow Modell mit Erweiterungen; Endogene Wachstumstheorie; Empirische Überprüfung der Wachstumsmodelle; Empirische Wachstumsregressionen; Wachstumszerlegung; Wachstumsfördernde Wirtschaftspolitik	6 C
Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: Modul "Makroökonomik I", Modul "Statistik"
Sprache: Deutsch	Modulverantwortliche[r]: Prof. Dr. Holger Strulik
Angebotshäufigkeit: jedes zweite Semester	Dauer: 1 Semester
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester: 3 - 6
Maximale Studierendenzahl: nicht begrenzt	

Georg-August-Universität Göttingen Modul B.WIWI-VWL.0007: Einführung in die Ökonometrie <i>English title: Introduction to Econometrics</i>	6 C 6 SWS
Lernziele/Kompetenzen: Inhaltliche Vertiefung der für die empirische Wirtschaftsforschung relevanten methodischen Grundlagen aus dem Basismodul Statistik, Einführung in ökonometrische Methoden der quantitativen Wirtschaftsforschung, insbesondere der Regression, sowie die praktische Anwendung.	Arbeitsaufwand: Präsenzzeit: 84 Stunden Selbststudium: 96 Stunden
Lehrveranstaltungen: 1. Einführung in die Ökonometrie (Vorlesung) 2. Einführung in die Ökonometrie (Übung) <i>Angebotshäufigkeit:</i> jedes Wintersemester 3. Einführung in die Ökonometrie (Tutorium) <i>Angebotshäufigkeit:</i> jedes Wintersemester	2 SWS 2 SWS 2 SWS
Prüfung: Klausur (90 Minuten)	6 C
Prüfungsanforderungen: Das Klassische Regressionsmodell - Schätzung und Hypothesentests, Probleme bei Verletzung der Modellannahmen, Modellselektion und Modellspezifizierung, Erweiterung des Klassischen Regressionsmodells, Diskrete Zielvariablen; Zeitreihenmodelle (Klassische Modelle, AR); Paneldaten (Einführung)	
Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: Modul "Mathematik", Modul "Statistik"
Sprache: Deutsch	Modulverantwortliche[r]: Prof. Dr. Helmut Herwartz
Angebotshäufigkeit: jedes Semester	Dauer: 1 Semester
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester: 3 - 6
Maximale Studierendenzahl: nicht begrenzt	

Georg-August-Universität Göttingen Modul B.WIWI-VWL.0008: Geldtheorie und Geldpolitik English title: <i>Money and International Finance</i>	6 C 4 SWS
---	--------------

Lernziele/Kompetenzen: Die Vorlesung bietet insbesondere einen Überblick über die grundsätzliche Bedeutung von Geld sowie seines Innen- und Außenwertes. Es werden die theoretischen Möglichkeiten der Geldschaffung und der Bestimmungsfaktoren der Geldnachfrage dargestellt und ihre praktische Bedeutung diskutiert. Nach der Darstellung eines Geldmarktgleichgewichts werden die Ziele, die Strategien und die Instrumente der Geldpolitik analysiert und außenwirtschaftliche Einflüsse untersucht. Schließlich werden Theorien zur Wirkung der Geldpolitik dargestellt und diese kritisch reflektiert. Die Studierenden 1. Sind mit den grundlegenden Merkmalen und Funktionen von Geld vertraut und können die gesellschaftliche Relevanz von Geld einordnen 2. Kennen die volkswirtschaftliche Bedeutung des Zinses und können diese kritisch reflektieren 3. Wissen, wie Inflation gemessen wird und können die Wirkung und die gesellschaftliche Bedeutung von Inflation erfassen 4. Können Determinanten der Geldnachfrage darstellen und die Möglichkeiten und Grenzen der Schaffung von Geld identifizieren und sind mit den Bedingungen eines Geldmarktgleichgewichts vertraut 5. Haben einen Überblick über die Ziele, die Strategien und die Instrumente der Geldpolitik und die außenwirtschaftliche Einflüsse auf deren Wirksamkeit 6. Kennen die Theorien zur Wirkung geldpolitischer Maßnahmen und können diese kritisch reflektieren Im Rahmen der begleitenden Übung vertiefen die Studierenden die Kenntnisse aus der Vorlesung anhand ausgewählter theoretischer Fragestellungen.	Arbeitsaufwand: Präsenzzeit: 56 Stunden Selbststudium: 124 Stunden
--	---

Lehrveranstaltungen: 1. Geldtheorie und Geldpolitik (Vorlesung) 2. Geldtheorie und Geldpolitik (Übung)	2 SWS 2 SWS
Prüfung: Klausur (90 Minuten)	6 C

Prüfungsanforderungen: Nachweis von Kenntnissen der Geldtheorie und der Geldpolitik, insbesondere der Analyse der Bedeutung und der Funktionen von Geld sowie seines Innen- und Außenwerts. Nachweis von Kenntnissen über die Determinanten von Geldangebot und Geldnachfrage sowie den Zusammenhängen eines Geldmarktgleichgewichts. Außerdem sollen die Ziele, die Strategien und die Instrumente der Geldpolitik erklärt,	
--	--

ihre theoretischen Wirkungskanäle dargestellt und ihre praktische Umsetzbarkeit und ihr Erfolg kritisch reflektiert werden können.

Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: Modul "Makroökonomik I"
Sprache: Deutsch	Modulverantwortliche[r]: Prof. Dr. Gerhard Rübel
Angebotshäufigkeit: jedes Sommersemester	Dauer: 1 Semester
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester: 3 - 6
Maximale Studierendenzahl: nicht begrenzt	

Georg-August-Universität Göttingen Modul B.WIWI-VWL.0009: Arbeitsmarktökonomik English title: Labour Market Economy	6 C 4 SWS
---	--------------

Lernziele/Kompetenzen: Die Vorlesung befasst sich mit der Theorie von Arbeitsangebot und Arbeitsnachfrage sowie dem neoklassischen Arbeitsmarkt und dem keynesianischen Arbeitsmarkt. Weiterhin geht es um Fragen der Lohnbildung (Formen der Lohnverhandlung, Insider-Outsider, Effizienzlöhne, Investivlöhne, Gewinnbeteiligung). In der gesamtwirtschaftlichen Betrachtung werden die Phillipskurve und die Inflationsstabile Arbeitslosenquote NAIRU diskutiert. Anschließend geht es um konjunkturelle, strukturelle und lohnkostenbedingte Arbeitslosigkeit. Ansätze der Arbeitsmarktpolitik (angebotsorientierte Politik, nachfrageorientierte Politik, Mindestlohnpolitik, Kurzarbeit) bilden den Abschluss. Die Studierenden kennen die theoretischen Wirkungszusammenhänge auf dem Arbeitsmarkt in Abhängigkeit von unterschiedlichen modelltheoretischen Annahmen. Die Studierenden kennen verschiedene Aspekte der realen Lohnbestimmung, die von der einfachen Modelltheorie abweichen. Die Studierenden kennen mögliche Zusammenhänge zwischen Inflation und Beschäftigung. Die Studierenden sind fähig, die Ursachen aktueller Arbeitsmarktprobleme (wie zum Beispiel Arbeitslosigkeit) richtig zu diagnostizieren und Lösungsvorschläge zu bewerten. Sie sind fähig, politische Vorschläge im Bereich der Arbeitsmarktpolitik (wie zum Beispiel Mindestlöhne) theoretisch fundiert zu beurteilen. Im Rahmen der begleitenden Übung vertiefen die Studierenden die Kenntnisse aus der Vorlesung anhand spezieller wissenschaftlicher Journal-Artikel.	Arbeitsaufwand: Präsenzzeit: 56 Stunden Selbststudium: 124 Stunden
--	---

Lehrveranstaltungen: 1. Arbeitsmarktökonomik (Vorlesung) 2. Arbeitsmarktökonomik (Übung)	2 SWS 2 SWS
Prüfung: Klausur (90 Minuten)	6 C
Prüfungsvorleistungen: Bestehen von zwei von zwei Hausaufgaben	

Prüfungsanforderungen: Nachweis des sicheren Umgangs mit verschiedenen modelltheoretischen Analyserahmen zur Beantwortung verschiedener arbeitsmarktpolitischer Fragestellungen. Nachweis der Kenntnis der wichtigsten institutionellen Rahmenbedingungen der Arbeitsmärkte und ihrer Auswirkungen auf Lohnbildung und Beschäftigung.

Georg-August-Universität Göttingen Modul B.WIWI-VWL.0010: Einführung in die Institutionenökonomik <i>English title: Foundations of Institutional Economics</i>	6 C 2 SWS
Lernziele/Kompetenzen: Die Studierenden <ul style="list-style-type: none"> - kennen verschiedene Definitionen von internen und externen Institutionen, sowie deren Relevanz in der wirtschaftspolitischen Normsetzung. - kennen die Rolle von Eigentumsrechten und deren Durchsetzung in der ökonomischen Theorie und Praxis. - kennen Konzepte von Transaktionskosten und deren Wirkung auf die Interaktion von Individuen und Firmen auf dem Markt. - kennen die Rolle des Staates bei der Einführung und Durchsetzung externer Institutionen. - kennen Grundlagen der Neuen Politischen Ökonomik und deren Theorie der Demokratie, Bürokratie und Interessengruppe. - kennen institutionenökonomische Analysekonzepte wie die Prinzipal-Agenten-Theorie oder Moral Hazard, sowie experimentelle Forschungsergebnisse zur Institutionenanalyse. - kennen die Rolle und den Wandel von Verhaltensmodellen als wirtschaftspolitisches Instrument. 	Arbeitsaufwand: Präsenzzeit: 28 Stunden Selbststudium: 152 Stunden
Lehrveranstaltung: Einführung in die Institutionenökonomik (Vorlesung) Inhalte: <ul style="list-style-type: none"> - Definitionen externer und interner Institutionen - Institutionenökonomik und wirtschaftspolitische Normsetzung - Eigentumsrechte: Konzepte und Umsetzungsformen - Transaktionskosten: Theorie und Anwendungsmöglichkeiten - Staatstätigkeit und institutionelle Struktur - Neue politische Ökonomik als Teilbereich der Neuen Institutionenökonomik - Grundlagenkonzepte der Institutionenanalyse und experimentelle Ergebnisse - Verhaltensmodelle 	2 SWS
Prüfung: Klausur (90 Minuten) Prüfungsvorleistungen: Bestehen von einer von zwei angebotenen Hausaufgaben	6 C
Prüfungsanforderungen: Nachweis von Kenntnissen theoretischer Konzepte der Institutionenökonomik, sowie deren Anwendung auf aktuelle wirtschaftspolitische Fragestellungen.	
Zugangsvoraussetzungen:	Empfohlene Vorkenntnisse:

keine	Modul "Makroökonomik I", Modul "Mikroökonomik I"
Sprache: Deutsch	Modulverantwortliche[r]: Prof. Dr. Kilian Bizer
Angebotshäufigkeit: unregelmäßig	Dauer: 1 Semester
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester: 4 - 6
Maximale Studierendenzahl: nicht begrenzt	

Georg-August-Universität Göttingen Modul B.WIWI-VWL.0028: Einführung in die Spieltheorie English title: <i>Introduction in Game Theory</i>	6 C 4 SWS
--	--------------

Lernziele/Kompetenzen: In dieser Veranstaltung werden die Grundkonzepte der Spiel- und Entscheidungstheorie vermittelt. Diese Einführung erfolgt anwendungsorientiert und nimmt Bezug auf Erkenntnisse der Verhaltensökonomik. Durch die Pflichtlektüre und Diskussion grundlegender Forschungsartikel in wissenschaftlichen Fachzeitschriften werden die Studierenden an wissenschaftliches Arbeiten herangeführt und lernen dies kritisch zu reflektieren. Die Studierenden <ul style="list-style-type: none">- Kennen formale Modelle strategischer Interaktion und der Entscheidungen unter Unsicherheit und können diese (spiel-)theoretisch analysieren,- Kennen Anwendungsgebiete dieser grundlegenden Konzepte in den Wirtschaftswissenschaften,- Kennen die Grenzen der spieltheoretischen Betrachtungsweise, die sich in der experimentellen Wirtschaftsforschung zeigen.	Arbeitsaufwand: Präsenzzeit: 56 Stunden Selbststudium: 124 Stunden
--	---

Lehrveranstaltungen: 1. Einführung in die Spieltheorie (Vorlesung) 2. Einführung in die Spieltheorie (Übung) Inhalte: (Im Rahmen der Übung werden die Inhalte der Vorlesung verfestigt.)	2 SWS 2 SWS
--	----------------

Prüfung: Klausur (90 Minuten) Prüfungsvorleistungen: Einführung in die Spieltheorie	6 C
---	-----

Prüfungsanforderungen: Nachweis grundlegender Kenntnisse der Entscheidungstheorie, spieltheoretischer Modelle und Lösungskonzepte mittels der Bearbeitung von Rechen- und Textaufgaben, wobei auch Literaturwissen gefordert wird.	
--	--

Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: Module "Mikroökonomik I" und "II"

Georg-August-Universität Göttingen	6 C
Module B.WIWI-VWL.0059: International Financial Markets	2 WLH
Learning outcome, core skills: The course familiarizes students with the basic tools and concepts of international finance, including the balance of payment, exchange rates and trade. It focuses on understanding the international financial system. Further, aspects of financial globalization and multilateral institutions will also be discussed. The course enables students to follow to debate about the pros and cons of international financial markets with a deeper and wider theory based background.	Workload: Attendance time: 28 h Self-study time: 152 h
Course: International Financial Markets (Lecture)	2 WLH
Contents: <ul style="list-style-type: none"> • Basic concepts • Determining the exchange rate • Short term risks and long-term concepts • Exchange rate systems • Financial Globalization 	
Examination: Written examination (90 minutes)	
Examination requirements: Students demonstrate a good understanding of the basic tools and concepts of international finance.	
Admission requirements: none	Recommended previous knowledge: Econometrics I
Language: English	Person responsible for module: Prof. Dr. Tino Berger
Course frequency: every winter semester	Duration: 1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester: 3 - 4
Maximum number of students: not limited	

<p>Georg-August-Universität Göttingen</p> <p>Modul B.WIWI-WIN.0001: Management der Informationssysteme</p> <p><i>English title: Management of Business Information Systems</i></p>	<p>6 C 2 SWS</p>
<p>Lernziele/Kompetenzen:</p> <p>Nach erfolgreicher Teilnahme sind die Studierenden in der Lage,</p> <ul style="list-style-type: none"> - die Phasen einer Anwendungssystementwicklung zu beschreiben sowie dortige Instrumente erläutern und anwenden zu können, - Vorgehensweisen, Ansätze und Werkzeuge zur Entwicklung von Anwendungssystemen zu beschreiben, gegenüberzustellen und vor dem Hintergrund gegebener Problemstellungen zu bewerten, - Elemente von Modellierungstechniken und Gestaltungsmöglichkeiten von Anwendungssystemen zu beschreiben und zu erläutern, - ausgewählte Methoden zur Modellierung von Anwendungssystemen selbstständig anwenden zu können, - Prinzipien der Anwendungssystementwicklung auf gegebene Problemstellungen transferieren zu können, - in Gruppenarbeit mit Hilfe angeeigneter Kommunikations- und Organisationsfähigkeiten Aufgabenstellungen im Themenfeld der Vorlesung zu bearbeiten. 	<p>Arbeitsaufwand:</p> <p>Präsenzzeit: 28 Stunden</p> <p>Selbststudium: 152 Stunden</p>

Georg-August-Universität Göttingen	6 C
Module M.Che.1315: Chemical Dynamics at Surfaces	4 WLH
Learning outcome, core skills: The students of this module will achieve a deeper theoretical knowledge of chemical dynamics on surfaces as well as their influence on other fields in natural science, in order that they will be able to approach and solve problems regarding the quantitative questions in this field.	Workload: Attendance time: 56 h Self-study time: 124 h
Course: Lecture Combined with Tutorial: Chemical Dynamics at Surfaces	
Examination: Written examination (180 minutes) Examination prerequisites: Active participation in provided tutorial	6 C
Examination requirements: By Understanding and solving exemplary questions regarding this research field with the help of limited reference material in predetermined time will count as minimum 50 % of the required score	
Admission requirements: none	Recommended previous knowledge: none
Language: English	Person responsible for module: Prof. Dr. Alec Wodtke
Course frequency: normally every 2 years	Duration: 1 semester[s]
Number of repeat examinations permitted: 3 times	Recommended semester: 1 - 2
Maximum number of students: 64	

Georg-August-Universität Göttingen	Module M.Mat.0731: Advanced practical course in scientific computing	10 C 4 WLH
Learning outcome, core skills: Learning outcome: After having successfully completed the module, students are familiar with the analysis of problems in the area "Scientific computing" arising in practice. They <ul style="list-style-type: none">• develop large programming projects doing individual or group work;• analyse complex data sets and process them;• use special numerical libraries;• are experienced with advanced methods for the numerical solution of applied problems;• are familiar with basic principles of modular and structured programming in the context of scientific computing.	Workload: Attendance time: 56 h Self-study time: 244 h	
Core skills: After having successfully completed the module, students possess advanced practical experience in the area "Scientific computing". They will be able to <ul style="list-style-type: none">• identify mathematical problems in applied problems and convert them into a mathematical model;• implement numerical algorithms in a programming language or a user system;• structure complex programming tasks such that they can be efficiently done by group work.		
Course: Advanced practical course in scientific computing (Internship)	4 WLH	
Examination: Term Paper, max. 50 pages (not counted appendices), alternatively, presentation (appr. 30 minutes) Examination prerequisites: Advanced practical course in scientific computing	10 C	
Examination requirements: <ul style="list-style-type: none">• analysis and systematisation of applied problems;• knowledge in special methods of optimisation;• good programming skills.		
Admission requirements: none	Recommended previous knowledge: B.Mat.2300	
Language: English	Person responsible for module: Programme coordinator	
Course frequency: winter or summer semester, on demand	Duration: 1 semester[s]	
Number of repeat examinations permitted:	Recommended semester:	

twice	Master: 1 - 3
Maximum number of students: not limited	

Additional notes and regulations:

Instructor: Lecturers at the Institute of Numerical and Applied Mathematics

Georg-August-Universität Göttingen	Module M.Mat.0741: Advanced practical course in stochastics	10 C 6 WLH
Learning outcome, core skills: Learning outcome: After having successfully completed the module, students have deepened and expanded their knowledge of a stochastical simulation and analysis software that they acquired in the module "Practical course in stochastics". They have acquired advanced knowledge in project work in stochastics. They <ul style="list-style-type: none">• autonomously implement and interpret more complex stochastical problems using suitable software;• autonomously write more complex programs using suitable software;• master some advanced methods of statistical data analysis and stochastical simulation like e. g. kernel density estimation, the Bootstrap method, the creation of random numbers, the EM algorithm, survival analysis, the maximum-penalized-likelihood estimation and different test methods.	Workload: Attendance time: 84 h Self-study time: 216 h	
Core skills: After having successfully completed the module, students will be able to <ul style="list-style-type: none">• handle practical problems with the aid of advanced stochastical methods and the suitable stochastical simulation and analysis software and present the obtained results well;• use advanced visualisation methods for statistical data (e. g. of spatial data);• apply different algorithms to the suitable stochastical problem.		
Course: Advanced practical course in stochastics (Internship)	6 WLH	
Examination: Presentation (appr. 30 minutes) and term paper (max. 50 pages not counted appendices) Examination prerequisites: Advanced practical course in stochastics	10 C	
Examination requirements: Special knowledge in stochastics, especially mastery of complex stochastical simulation and analysis software as well as methods for data analysis		
Admission requirements: none	Recommended previous knowledge: M.Mat.3140	
Language: English	Person responsible for module: Programme coordinator	
Course frequency: each winter semester	Duration: 1 semester[s]	
Number of repeat examinations permitted: twice	Recommended semester: Master: 1 - 3	

Maximum number of students:	
------------------------------------	--

not limited

Additional notes and regulations:	
--	--

Instructor: Lecturers at the Institute of Mathematical Stochastics

Georg-August-Universität Göttingen	Module M.Mat.0971: Internship	10 C (Anteil SK: 10 C)
Learning outcome, core skills: After having successfully completed the module, students have competencies in project-oriented and research-oriented team work as well as in project management. They are familiar with methods, tools and processes of mathematics as well as the organisational and social environment in practice.	Workload: Attendance time: 0 h Self-study time: 300 h	
Examination: Presentation (appr. 20 minutes) and written report (max. 10 pages), not graded Examination prerequisites: Internship	10 C	
Examination requirements: Successfully handling of the posed duties according to the internship contract between the student and the enterprise.		
Admission requirements: none	Recommended previous knowledge: none	
Language: English	Person responsible for module: Programme coordinator	
Course frequency: each semester	Duration: 1 semester[s]	
Number of repeat examinations permitted: twice	Recommended semester: Master: 1 - 4; Promotion: 1 - 6	
Maximum number of students: not limited		
Additional notes and regulations: Instructor: Lecturers of the Unit Mathematics		

Georg-August-Universität Göttingen**Module M.Mat.3110: Higher analysis**9 C
6 WLH**Learning outcome, core skills:****Learning outcome:**

Weighted differently depending on the current course offer, after having successfully passed the module, students are familiar with basic principles of functional analysis respectively the description of linear elliptical differential equations in functional analysis.

They

- are familiar with the most known examples of function and sequence spaces like spaces of continuous functions, L_p , l_p and Sobolev spaces on bounded and unbounded areas;
- identify compactness of operators and analyse the solvability of general linear operator equations, especially of boundary value problems for linear elliptical differential equations with variable coefficients with the aid of the Riesz Fredholm theory;
- analyse the regularity of solutions of elliptical boundary value problems inside the domain in question and on its boundary;
- use basic theorems of linear operators in Banach spaces, especially the Banach-Steinhaus theorem, the Hahn-Banach theorem and the open mapping theorem;
- discuss weak convergence concepts and basic characteristics of dual and double-dual spaces;
- are familiar with basic concepts of spectral theory and the spectral theorem for bounded, self-adjoint operators.

Core skills:

After having successfully completed the module, students will be able to

- formulate and analyse differential equations and other problems in the language of functional analysis;
- identify and describe the relevance of characteristics of functional analysis like choice of a suitable function space, completeness, boundedness or compactness;
- evaluate the influence of boundary conditions and function spaces for existence, uniqueness and stability of solutions of differential equations.

Workload:

Attendance time:

84 h

Self-study time:

186 h

Courses:**1. Functional analysis / Partial differential equations** (Lecture)

4 WLH

2. Functional analysis / Partial differential equations - exercise session (Exercise)

2 WLH

Examination: Written examination (120 minutes)

9 C

Examination prerequisites:

M.Mat.3110.Ue: Achievement of at least 50% of the exercise points and presentation, twice, of solutions in the exercise sessions

Examination requirements:

Proof of the advanced knowledge about functional analysis or partial differential equations

Admission requirements: none	Recommended previous knowledge: B.Mat.0021, B.Mat.0022, B.Mat.1100
Language: English	Person responsible for module: Programme coordinator
Course frequency: each summer semester	Duration: 1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester: Bachelor: 4 - 6; Master: 1 - 4
Maximum number of students: not limited	

Additional notes and regulations:

- **Instructor:** Lecturers at the Mathematical Institute or at the Institute of Numerical and Applied Mathematics
- **Written examination:** This module can be completed by taking a lecture course counting towards the modules B.Mat.2100 or B.Mat.2110. Compared to the exams of the modules B.Mat.2100 respectively B.Mat.2110, exams of the module "Higher analysis" have a higher level of difficulty and test advanced knowledge.
- **Exclusions:** The module "Higher analysis" cannot be completed by taking a lecture course that has already been accounted in the Bachelor's studies.

Georg-August-Universität Göttingen	9 C
Module M.Mat.3130: Operations research	6 WLH

Learning outcome, core skills: Learning outcome: The successful completion of the module enables students to learn methods, concepts, theories and applications in the area of the theory of operations research. Depending on the current course offer the following content-related competencies may be pursued. Students <ul style="list-style-type: none">• are able to identify problems of operations research in application-oriented problems and formulate them as optimisation problems;• know methods for the modelling of application-oriented problems and are able to apply them;• evaluate the target function included in a model and the side conditions on the basis of their particular important characteristics;• analyse the complexity of the particular resulting optimisation problem;• are able to develop optimisation methods for the solution of a problem of operation research or adapt general methods to special problems;• know methods with which the quality of optimal solutions can be estimated to the upper and lower and apply them to the problem in question;• differentiate between accurate solution methods, approximation methods with quality guarantee and heuristics and evaluate different methods on the basis of the quality of the found solutions and their computing time;• interpret the found solutions for the underlying practical problem and evaluate the model and solution method on this basis. Core skills: After having successfully completed the module, students will be able to <ul style="list-style-type: none">• discuss basic concepts of the area "Operations research";• explain basic ideas of proof in the area "Operations research";• identify typical applications in the area "Operations research". 1. Lecture course (Lecture)	4 WLH
2. Exercise session (Exercise)	2 WLH

Examination: Oral examination (approx. 20 minutes)	9 C
Examination prerequisites: Achievement of at least 50% of the exercise points and presentation, twice, of solutions in the exercise sessions	

Examination requirements: Proof of the acquisition of special skills and the mastery of special knowledge in the area "Analytic number theory"	
--	--

Admission requirements: none	Recommended previous knowledge: B.Mat.3311
Language: English	Person responsible for module: Programme coordinator
Course frequency: Usually subsequent to the module B.Mat.3311 "Advances in analytic number theory"	Duration: 1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester: Master: 1 - 3
Maximum number of students: not limited	
Additional notes and regulations: Instructor: Lecturers at the Mathematical Institute	

Georg-August-Universität Göttingen	Module M.Mat.4512: Specialisation in analysis of partial differential equations	9 C 6 WLH
Learning outcome, core skills: Learning outcome: The successful completion of modules of the cycle "Analysis of partial differential equations" enables students to learn methods, concepts, theories and applications in the area "Analysis of partial differential equations". During the course of the cycle students will be successively introduced to current research topics and able to carry out independent contributions to research (e. g. within the scope of a Master's thesis). Depending on the current course offer the following content-related competencies may be pursued. Students <ul style="list-style-type: none">• are familiar with the most important types of partial differential equations and know their solutions;• master the Fourier transform and other techniques of the harmonic analysis to analyse partial differential equations;• are familiar with the theory of generalised functions and the theory of function spaces and use these for solving differential partial equations;• apply the basic principles of functional analysis to the solution of partial different equations;• use different theorems of function theory for solving partial different equations;• master different asymptotic techniques to study characteristics of the solutions of partial different equations;• are paradigmatically familiar with broader application areas of linear theory of partial different equations;• are paradigmatically familiar with broader application areas of non-linear theory of partial different equations;• know the importance of partial different equations in the modelling in natural and engineering sciences;• master some advanced application areas like parts of microlocal analysis or parts of algebraic analysis. Core skills: After having successfully completed the module, students will be able to <ul style="list-style-type: none">• enhance concepts and methods for special problems and applications in the area "Analysis of partial differential equations";• prepare substantial ideas of proof in the area "Analysis of partial differential equations". Georg-August-Universität Göttingen	Module M.Mat.4712: Special course in analysis of partial differential equations	3 C 2 WLH
Learning outcome, core skills:		Workload:
Learning outcome:		
The successful completion of modules of the cycle "Analysis of partial differential equations" enables students to learn methods, concepts, theories and applications in the area "Analysis of partial differential equations". During the course of the cycle students will be successively introduced to current research topics and able to carry out independent contributions to research (e. g. within the scope of a Master's thesis). Depending on the current course offer the following content-related competencies may be pursued. Students		
<ul style="list-style-type: none"> • are familiar with the most important types of partial differential equations and know their solutions; • master the Fourier transform and other techniques of the harmonic analysis to analyse partial differential equations; • are familiar with the theory of generalised functions and the theory of function spaces and use these for solving differential partial equations; • apply the basic principles of functional analysis to the solution of partial different equations; • use different theorems of function theory for solving partial different equations; • master different asymptotic techniques to study characteristics of the solutions of partial different equations; • are paradigmatically familiar with broader application areas of linear theory of partial different equations; • are paradigmatically familiar with broader application areas of non-linear theory of partial different equations; • know the importance of partial different equations in the modelling in natural and engineering sciences; • master some advanced application areas like parts of microlocal analysis or parts of algebraic analysis. 		Attendance time: 28 h Self-study time: 62 h
Core skills:		
After having successfully completed the module, students will be able to		
<ul style="list-style-type: none"> • conduct scholarly debates about problems of the area "Analysis of partial differential equations"; • become acquainted with special problems in the area "Analysis of partial differential equations" to carry out scientific work for it.

Learning outcome:	Attendance time: 28 h Self-study time: 62 h
In the modules of the cycle "Algebraic topology" students get to know the most important classes of topological spaces as well as algebraic and analytical tools for studying these spaces and the mappings between them. The students use these tools in geometry, mathematical physics, algebra and group theory. They are introduced to current research questions and enabled to carry out independent contributions to research, e. g. within the scope of a Master's thesis. Algebraic topology uses concepts and tools of algebra, geometry and analysis and can be applied to these areas. In the course offer several aspects are considered at a time and a cycle will only cover some of the learning objectives mentioned below. The introduction to the cycle and the specialisation in the cycle will normally cover different aspects of algebraic topology and supplement one another complementarily. The following content-related competencies are pursued. Students	
<ul style="list-style-type: none"> • know the basic concepts of set-theoretic topology and continuous mappings; • construct new topologies from given topologies; • know special classes of topological spaces and their special characteristics like CW complexes, simplicial complexes and manifolds; • apply basic concepts of category theory to topological spaces; • use concepts of functors to obtain algebraic invariants of topological spaces and mappings; • know the fundamental group and the covering theory as well as the basic methods for the computation of fundamental groups and mappings between them; • know homology and cohomology, calculate those for important examples and with the aid of these deduce non-existence of mappings as well as fixed-point theorems; • calculate homology and cohomology with the aid of chain complexes; • deduce algebraic characteristics of homology and cohomology with the aid of homological algebra; • become acquainted with connections between analysis and topology; • apply algebraic structures to deduce special global characteristics of the cohomology of a local structure of manifolds. 	
Core skills:	
After having successfully completed the module, students will be able to	
<ul style="list-style-type: none"> • conduct scholarly debates about problems of the area "Algebraic topology"; • become acquainted with special problems in the area "Algebraic topology" to carry out scientific work for it.

Learning outcome, core skills: Learning outcome: In the modules of the cycle "Mathematical methods of physics" students get to know different mathematical methods and techniques that play a role in modern physics. They are introduced to current research questions and enabled to carry out independent contributions to research, e. g. within the scope of a Master's thesis. The topics of the cycle can be divided into four blocks, a cycle normally contains parts of different blocks, that topically supplement each other, but can also be read within one block. The introducing parts of the cycle form the basis for the advanced specialisation area. The topic blocks are <ul style="list-style-type: none">• harmonic analysis, algebraic structures and representation theory, (group) effects;• operator algebra, C^* algebra and von-Neumann algebra;• operator theory, perturbation and scattering theory, special PDE, microlocal analysis, distributions;• (semi) Riemannian geometry, symplectic and Poisson geometry, quantization. One of the aims is that a connection to physical problems is visible, at least in the motivation of the covered topics. Preferably, in the advanced part of the cycle, the students should know and be able to carry out practical applications themselves. Core skills: After having successfully completed the module, students will be able to <ul style="list-style-type: none">• conduct scholarly debates about problems of the area "Mathematical methods of physics";• become acquainted with special problems in the area "Mathematical methods of physics" to carry out scientific work for it. Georg-August-Universität Göttingen	3 C
Module M.Mat.4815: Seminar on mathematical methods in physics	2 WLH

Learning outcome, core skills: Learning outcome: In the modules of the cycle "Mathematical methods of physics" students get to know different mathematical methods and techniques that play a role in modern physics. They are introduced to current research questions and enabled to carry out independent contributions to research, e. g. within the scope of a Master's thesis. The topics of the cycle can be divided into four blocks, a cycle normally contains parts of different blocks, that topically supplement each other, but can also be read within one block. The introducing parts of the cycle form the basis for the advanced specialisation area. The topic blocks are <ul style="list-style-type: none">• harmonic analysis, algebraic structures and representation theory, (group) effects;• operator algebra, C^* algebra and von-Neumann algebra;• operator theory, perturbation and scattering theory, special PDE, microlocal analysis, distributions;• (semi) Riemannian geometry, symplectic and Poisson geometry, quantization. One of the aims is that a connection to physical problems is visible, at least in the motivation of the covered topics. Preferably, in the advanced part of the cycle, the students should know and be able to carry out practical applications themselves. Core skills: After having successfully completed the module, students will be able to <ul style="list-style-type: none">• become acquainted with a mathematical topic in the area "Mathematical methods of physics" and present it in a talk;• conduct scholarly debates in a familiar context. Module M.Mat.4915: Advanced seminar on mathematical methods in physics	2 WLH

Learning outcome, core skills: Learning outcome: In the modules of the cycle "Mathematical methods of physics" students get to know different mathematical methods and techniques that play a role in modern physics. They are introduced to current research questions and enabled to carry out independent contributions to research, e. g. within the scope of a Master's thesis. The topics of the cycle can be divided into four blocks, a cycle normally contains parts of different blocks, that topically supplement each other, but can also be read within one block. The introducing parts of the cycle form the basis for the advanced specialisation area. The topic blocks are <ul style="list-style-type: none">• harmonic analysis, algebraic structures and representation theory, (group) effects;• operator algebra, C^* algebra and von-Neumann algebra;• operator theory, perturbation and scattering theory, special PDE, microlocal analysis, distributions;• (semi) Riemannian geometry, symplectic and Poisson geometry, quantization. One of the aims is that a connection to physical problems is visible, at least in the motivation of the covered topics. Preferably, in the advanced part of the cycle, the students should know and be able to carry out practical applications themselves. Core skills: After having successfully completed the module, students will be able to <ul style="list-style-type: none">• present a mathematical topic of current research interest in the area "Mathematical methods of physics" in a talk;• conduct scholarly debates with reference to current research.	Workload: Attendance time: 28 h Self-study time: 62 h

Course: Advanced seminar	2 WLH
Examination: Oral Presentation (approx. 75 minutes) Examination prerequisites: Participation in the advanced seminar	3 C
Examination requirements: Autonomous permeation and presentation of complex mathematical issues of current research literature in the area "Mathematical methods in physics"	

Admission requirements: none	Recommended previous knowledge: M.Mat.4515
Language: English	Person responsible for module: Programme coordinator
Course frequency:	Duration:

not specified	1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester: Master: 1 - 4
Maximum number of students: not limited	
Additional notes and regulations: Instructor: Lecturers at the Mathematical Institute	

Georg-August-Universität Göttingen	3 C
Module M.Mat.4921: Advanced seminar on algebraic geometry	2 WLH

Learning outcome, core skills: Learning outcome: In the modules of the cycle "Algebraic geometry" students get to know the most important classes of algebraic varieties and schemes as well as the tools for studying these objects and the mappings between them. The students apply these skills to problems of arithmetic or complex analysis. They are introduced to current research questions and enabled to carry out independent contributions to research, e. g. within the scope of a Master's thesis. Algebraic geometry uses and connects concepts of algebra and geometry and can be used versatiley. In the course offer several aspects are considered at a time and a cycle will only cover some of the learning objectives mentioned below. The introduction to the cycle and the specialisation in the cycle will normally cover different aspects of algebraic geometry and supplement one another complementarily. The following content-related competencies are pursued. Students <ul style="list-style-type: none">• are familiar with commutative algebra, also in greater detail;• know the concepts of algebraic geometry, especially varieties, schemes, sheafs, bundles;• examine important examples like elliptic curves, Abelian varieties or algebraic groups;• use divisors for classification questions;• study algebraic curves;• prove the Riemann-Roch theorem and apply it;• use cohomological concepts and know the basics of Hodge theory;• apply methods of algebraic geometry to arithmetical questions and obtain e. g. finiteness principles for rational points;• classify singularities and know the significant aspects of the dimension theory of commutative algebra and algebraic geometry;• get to know connections to complex analysis and to complex geometry. Core skills: After having successfully completed the module, students will be able to <ul style="list-style-type: none">• present a mathematical topic of current research interest in the area "Algebraic geometry" in a talk;• conduct scholarly debates with reference to current research. Course: Advanced seminar	2 WLH
Examination: Oral Presentation (approx. 75 minutes) Examination prerequisites: Participation in the advanced seminar	3 C
Examination requirements: Autonomous permeation and presentation of complex mathematical issues of current research literature in the area "Image and geometry processing"	
Admission requirements: none	Recommended previous knowledge: M.Mat.4538
Language: English	Person responsible for module: Programme coordinator
Course frequency: not specified	Duration: 1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester: Master: 1 - 4
Maximum number of students: not limited	
Additional notes and regulations: Instructor: Lecturers at the Institute of Numerical and Applied Mathematics	

Georg-August-Universität Göttingen	3 C
Module M.Mat.4939: Advanced seminar on scientific computing / applied mathematics	2 WLH

Learning outcome, core skills: Learning outcome: The successful completion of modules of the cycle "Scientific computing / applied mathematics" enables students to learn and apply methods, concepts, theories and applications in the area of "Scientific computing / applied mathematics". During the course of the cycle students will be successively introduced to current research topics and able to carry out independent contributions to research (e. g. within the scope of a practical course in scientific computing or a Master's thesis). Depending on the current course offer the following content-related competencies may be pursued. Students <ul style="list-style-type: none">• are familiar with the theory of basic mathematical models of the corresponding subject area, especially about the existence and uniqueness of solutions;• know basic methods for the numerical solution of these models;• analyse stability, convergence and efficiency of numerical solution strategies;• apply available software for the solution of the corresponding numerical methods and evaluate the results sceptically;• evaluate different numerical methods on the basis of the quality of the solutions, the complexity and their computing time;• are informed about current developments of scientific computing, like e. g. GPU computing and use available soft- and hardware;• use methods of scientific computing for solving application problems, like e. g. of natural and business sciences. Core skills: After having successfully completed the module, students will be able to <ul style="list-style-type: none">• present a mathematical topic of current research interest in the area "Scientific computing / applied mathematics" in a talk;• conduct scholarly debates with reference to current research.	Workload: Attendance time: 28 h Self-study time: 62 h

Instructor: Lecturers at the Institute of Mathematical Stochastics

Georg-August-Universität Göttingen	3 C
Module M.Mat.4944: Advanced seminar on mathematical statistics	2 WLH

Learning outcome, core skills:**Learning outcome:**

The successful completion of modules of the cycle "Mathematical statistics" enables students to learn methods, concepts, theories and applications in the area of "Mathematical statistics". During the course of the cycle students will be successively introduced to current research topics and able to carry out independent contributions to research (e. g. within the scope of a Bachelor's or Master's thesis). Depending on the current course offer the following content-related competencies may be pursued.

Students

- are familiar with the most important methods of mathematical statistics like estimates, testing, confidence propositions and classification and use them in simple models of mathematical statistics;
- evaluate statistical methods mathematically precisely via suitable risk and loss concepts;
- analyse optimality characteristics of statistical estimate methods via lower and upper bounds;
- analyse the error rates of statistical testing and classification methods based on the Neyman Pearson theory;
- are familiar with basic statistical distribution models that base on the theory of exponential indexed families;
- know different techniques to obtain lower and upper risk bounds in these models;
- are confident in modelling typical data structures of regression;
- analyse practical statistical problems in a mathematically accurate way with the techniques learned on the one hand and via computer simulations on the other hand;
- are able to mathematically analyse resampling methods and apply them purposively;
- are familiar with advanced tools of non-parametric statistics and empirical process theory;
- independently become acquainted with a current topic of mathematical statistics;
- evaluate complex statistical methods and enhance them in a problem-oriented way.

Core skills:

After having successfully completed the module, students will be able to

- present a mathematical topic of current research interest in the area "Mathematical statistics" in a talk;
- conduct scholarly debates with reference to current research.

Georg-August-Universität Göttingen Modul M.Phi.101: Ausgewählte Themen der Theoretischen Philosophie English title: <i>Selected Topics in Theoretical Philosophy</i>	9 C 4 SWS
--	--------------

Lernziele/Kompetenzen: Das Wahlpflichtmodul dient der Erweiterung der Kenntnisse und Fähigkeiten in einem Wahlbereich der Philosophie. Im 42-C-Master-Fach wird hier ein Schwerpunkt mit vertieften Kenntnissen ausgebildet. Im 78-C-Master-Fach sollen ergänzende Themen studiert werden, die nicht im Bereich des zu wählenden Studienschwerpunktes (s. Module 104-107) liegen. Die Studierenden besitzen vermehrte Kenntnis von Theorieansätzen und umfassendere Problemperspektiven auf Gebieten der Theoretischen Philosophie. Sie kennen unterschiedliche Methoden und Terminologien, können Positionen und Problemstellungen in größere Zusammenhänge einordnen, mit anderen Positionen vergleichen und ihre Relevanz und Leistungsfähigkeit beurteilen. Z.B. können erkenntnistheoretische Ansätze durch zusätzliche Kenntnisse aus der Sprachphilosophie, der Ontologie oder der Philosophie des Geistes adäquater eingeschätzt werden und umgekehrt.	Arbeitsaufwand: Präsenzzeit: 56 Stunden Selbststudium: 214 Stunden
---	---

Lehrveranstaltungen: 1. Eine Vorlesung für Fortgeschrittene (= nicht Einführungskurs), Seminar oder Hauptseminar zu einem Thema der theoretischen Philosophie	2 SWS
2. Ein Seminar oder Hauptseminar zu einem Thema der theoretischen Philosophie	2 SWS
Prüfung: Hausarbeit (max. 15 Seiten) oder mündliche Prüfung (ca. 30 Minuten)	9 C
Prüfungsvorleistungen: Eine kleine schriftliche Leistung pro Veranstaltung (max. 3 Seiten)	

Prüfungsanforderungen: Kenntnisse wichtiger Positionen der Sprachphilosophie, Erkenntnistheorie, Philosophie des Geistes, Wissenschaftsphilosophie oder Metaphysik; Fähigkeit, philosophische Probleme in diesen Bereichen zu behandeln und Lösungsvorschläge unter sachgerechter Abwägung von Argumenten zu diskutieren.	
---	--

Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: keine

Georg-August-Universität Göttingen Modul M.WIWI-BWL.0023: Management Accounting <i>English title: Management Accounting</i>		6 C 3 SWS
Lernziele/Kompetenzen: Die Studierenden sollen die grundlegende Ziele einer wertorientierten Unternehmensführung und die Konzepte (z.B. Value Based Management-Systeme) zu ihrer Implementierung in Unternehmen kennenlernen. Sie sollen die Ansätze des Wertmanagements in Verbindung mit traditionellen Kennzahlen und Aspekten der Investitionsrechnung bzw. der Unternehmensbewertung setzen können anwenden können.	Arbeitsaufwand: Präsenzzeit: 42 Stunden Selbststudium: 138 Stunden	
Lehrveranstaltungen: 1. Management Accounting (Vorlesung) <i>Inhalte:</i> Die Veranstaltung gliedert sich in 3 inhaltliche Teile: Im ersten Teil werden die Grundlagen des strategischen Managements mit den Konzepten des Management Accounting in Verbindung gebracht und die zentralen Fragestellungen abgeleitet. Der zweite Teil beschäftigt sich mit dem Vergleich von traditionellen und wertorientierten Kennzahlen. Den Abschluss bildet die Umsetzung der wertorientierter Unternehmensführung im Rahmen der Investitionsrechnung und der Unternehmensführung. 2. Management Accounting (Übung)		2 SWS 1 SWS
Prüfung: Klausur (90 Minuten)	6 C	
Prüfungsanforderungen: Nachweis von Kenntnissen der Konzepte des Kostenmanagements, der wertorientierten Unternehmensführung und ihrer Instrumente sowie des Erreichens der Lernziele.		
Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: Grundkenntnisse in Controlling	
Sprache: Deutsch	Modulverantwortliche[r]: Prof. Dr. Michael Wolff	
Angebotshäufigkeit: jedes Wintersemester	Dauer: 1 Semester	
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester: 1 - 2	
Maximale Studierendenzahl: nicht begrenzt		

Georg-August-Universität Göttingen Modul M.WIWI-BWL.0034: Logistik- und Supply Chain Management <i>English title: Logistics and Supply Chain Management</i>		6 C 3 SWS
Lernziele/Kompetenzen: Die Studierenden <ul style="list-style-type: none"> - kennen die Teilbereiche und Funktionen der Logistik sowie des Supply Chain Managements und können diese klassifizieren - kennen den Begriff „Standortplanung“, können dessen Teilgebiete definieren und verschiedene OR-Modelle und Verfahren zur Standortbestimmung anwenden - können das klassische Transportproblem erläutern und kennen dessen graphentheoretische Grundlagen - kennen verschiedene Lösungsalgorithmen für das Transportproblem und können diese auch auf Sonderformen des klassischen Transportproblems anwenden - kennen die Ausgestaltungsformen von Supply Chains und das SCOR-Modell - können Produkt- und Prozessdesign voneinander abgrenzen - kennen mögliche Formen der Vertragsgestaltung im Supply Chain Management - kennen die verschiedenen Modelle der Bestellplanung und die Bestellregeln - können statische Lagerhaltungsmodelle interpretieren und anwenden - können dynamische Modelle voneinander abgrenzen und anwenden 	Arbeitsaufwand: Präsenzzeit: 42 Stunden Selbststudium: 138 Stunden	
Lehrveranstaltungen:		
1. Logistik- und Supply Chain Management (Vorlesung) <i>Inhalte:</i> Inhaltlicher Schwerpunkt der Veranstaltung ist die Betrachtung der verschiedenen logistischen Strukturen und Probleme in und zwischen produzierenden Unternehmen. Dazu werden Quantitative Modelle vorgestellt und auf die Bereiche der Standortwahl, der Transportplanung, des Supply Chain Management und der Lagerhaltung angewendet.		2 SWS
2. Logistik- und Supply Chain Management (Übung)		1 SWS
Prüfung: Klausur (90 Minuten) Prüfungsanforderungen: Die Studierenden weisen in der Prüfung Kenntnisse in den folgenden Bereichen nach: <ul style="list-style-type: none"> - Grundlagen logistischer Problemstellungen - Standortplanung - Transportplanung - Supply Chain Management - Lagerhaltungsmodelle - Anwendung der vorgestellten OR-Modelle und Algorithmen auf die Problemstellungen der obigen Teilbereiche 	6 C	

Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: Modul "Unternehmensplanung"
Sprache: Deutsch	Modulverantwortliche[r]: Prof. Dr. Jutta Geldermann
Angebotshäufigkeit: jedes 3. Semester	Dauer: 1 Semester
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester: 1 - 4
Maximale Studierendenzahl: nicht begrenzt	

Georg-August-Universität Göttingen	6 C
Module M.WIWI-QMW.0004: Econometrics I	4 WLH
Learning outcome, core skills: This lecture provides a detailed introduction and discussion to the theory of several topics of econometrics. In a practical course the students will apply the methods discussed to real economic data and problems using the statistical software packages Eviews and R.	Workload: Attendance time: 56 h Self-study time: 124 h
Courses: 1. Econometrics I (Lecture) <i>Contents:</i> Multiple linear regression model: Estimation, Inference and Asymptotics. Maximum likelihood modeling. Generalized least squares. Stochastic regressors. Instrumental variable estimators. Generalized method of moments, likelihood based inference. Dynamic models, weak exogeneity, cointegration, stochastic integration.	2 WLH
2. Econometrics I (Tutorial)	2 WLH
Examination: Written examination (90 minutes) Examination requirements: Linear regression models, generalized linear regression models. OLS, GLS, EGLS estimation. Multiplikative heteroskedasticity, autocorrelation. LM specification testing, Durbin Watson test. Convergence in probability, convergence in distribution. Asymptotics (consistency, asymptotic normality) of OLS estimators. IV estimation, GMM estimation.	6 C
Admission requirements: none	Recommended previous knowledge: Necessary: Mathematics (linear algebra), Statistics in addition: Introduction to econometrics (or equal lecture)
Language: English	Person responsible for module: Prof. Dr. Helmut Herwartz
Course frequency: every semester	Duration: 1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester: 2 - 3
Maximum number of students: not limited	

Georg-August-Universität Göttingen	Module M.WIWI-QMW.0009: Introduction to Time Series Analysis	6 C 4 WLH
Learning outcome, core skills: The students <ul style="list-style-type: none">• learn concepts and techniques related to the analysis of time series and forecasting.• gain a solid understanding of the stochastic mechanisms underlying time series data.• learn how to analyse time series using statistical software packages and how to interpret the results obtained.	Workload: Attendance time: 56 h Self-study time: 124 h	
Courses: 1. Introduction to Time Series Analysis (Lecture) <i>Contents:</i> Classical time series decomposition analysis (moving averages, transformations of time series, parametric trend estimates, seasonal and cyclic components), exponential smoothing, stochastic models for time series (multivariate normal distribution, autocovariance and autocorrelation function), stationarity, spectral analysis, general linear time series models and their properties, ARMA models, ARIMA models, ARCH and GARCH models. 2. Introduction to Time Series Analysis (Tutorial)		2 WLH 2 WLH
Examination: Written examination (90 minutes) Examination requirements: The students show their ability to analyse time series using specific statistical techniques, can derive and interpret properties of stochastic models for time series, and can decide on appropriate models for given time series data. The students are able to implement time series analyses using statistical software and to interpret the corresponding results. The exam covers contents of both the lecture and the exercise class.		6 C
Admission requirements: none	Recommended previous knowledge: Statistics	
Language: English	Person responsible for module: Prof. Dr. Helmut Herwartz	
Course frequency: every year	Duration: 1 semester[s]	
Number of repeat examinations permitted: twice	Recommended semester: 2 - 3	
Maximum number of students: not limited		

Georg-August-Universität Göttingen	6 C
Module M.WIWI-VWL.0041: Panel Data Econometrics	4 WLH
<p>Learning outcome, core skills: Static and dynamic panel data models for continuous and discrete dependent variables. Empirical evaluation of economic models is an important feature of the study and application of economics. The course is concerned with the <i>application</i> of econometric methods, with little emphasis on the mathematical aspects of the subject (which may be studied in other modules). The computer software package STATA will be used for practical work. Previous knowledge of intermediate econometrics is required.</p> <p>This course aims to study panel data econometric techniques in an intuitive and practical way and to provide the skills and understanding to read and evaluate empirical literature and to carry out empirical research.</p>	<p>Workload: Attendance time: 56 h Self-study time: 124 h</p>
<p>Courses: 1. Panel Data Econometrics (Lecture) 2. Panel Data Econometrics (Tutorial)</p>	2 WLH 2 WLH
Examination: Term Paper (max. 10 pages, based on the tutorial)	
Examination: Written examination (120 minutes)	
<p>Examination requirements: Static panel data models; Fixed effects; random effects; Between estimation; Dynamic panel data models; Arellano-Bond estimator; Pooled mean group estimation; discrete choice Stata</p>	
<p>Admission requirements: none</p>	<p>Recommended previous knowledge: Econometrics I</p>
<p>Language: English</p>	<p>Person responsible for module: Prof. Dr. Inmaculada Martinez-Zarzoso</p>
<p>Course frequency: every summer semester</p>	<p>Duration: 1 semester[s]</p>
<p>Number of repeat examinations permitted: twice</p>	<p>Recommended semester: 2 - 4</p>
<p>Maximum number of students: 30</p>	

Georg-August-Universität Göttingen Modul S.RW.1111: Einführung in das Zivilrecht (Vorlesung und Übung) English title: <i>Introduction to Civil Law (Lecture and Exercises)</i>	8 C 6 SWS
--	--------------

Lernziele/Kompetenzen: Nach erfolgreichem Absolvieren des Moduls <ul style="list-style-type: none"> • haben die Studierenden grundlegende Kenntnisse des Zivilrechts und des Handelsrechts erlangt; • haben die Studierenden gelernt, zwischen Verpflichtungsgeschäft und Verfügungsgeschäft sowie zwischen vertraglichen und deliktischen Ansprüchen zu differenzieren; • kennen die Studierenden die wesentlichen Vertragstypen; • kennen die Studierenden die dogmatischen Konzeptionen des Zivilrechts in ihrer systematischen, ideellen und praktischen Bedeutung; • kennen die Studierenden die Methoden der Gesetzesauslegung (Wortlaut, systematische, historische, teleologische Auslegung) und können diese anwenden; • können die Studierenden die Technik der Falllösung im Bereich des Zivilrechts anwenden; • sind die Studierenden in der Lage, die erworbenen Kenntnisse bei der Lösung einschlägiger Fälle umzusetzen und sich mit den aufgeworfenen Rechtsfragen kritisch auseinanderzusetzen. 	Arbeitsaufwand: Präsenzzeit: 84 Stunden Selbststudium: 156 Stunden
---	---

Lehrveranstaltung: Einführung in das Zivilrecht (Vorlesung, Übung)	6 SWS
Prüfung: Klausur (120 Minuten)	8 C
Prüfungsvorleistungen: Einführung in das Zivilrecht (Vorlesung und Übung)	

Prüfungsanforderungen: Durch die Modulprüfung weisen die Studierenden nach, dass sie, <ul style="list-style-type: none"> • grundlegende Kenntnisse im Zivil- und Handelsrecht aufweisen, • ausgewählte Tatbestände des Zivilrechts beherrschen, • die zugehörigen methodischen Grundlagen beherrschen und • systematisch an einen zivilrechtlichen Fall herangehen und diesen in vertretbarer Weise lösen können. 	
---	--

Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: keine
Sprache: Deutsch	Modulverantwortliche[r]: Prof. Dr. Joachim Münch
Angebotshäufigkeit: jedes Semester	Dauer: 1 Semester
Wiederholbarkeit: gemäß Prüfungs- und Studienordnung	Empfohlenes Fachsemester:

Maximale Studierendenzahl:

nicht begrenzt

Georg-August-Universität Göttingen Modul SK.FS.EN-FW-C1-1: Business English I - C1.1 <i>English title: Business English I - C1.1</i>	6 C 4 SWS
--	--------------

Lernziele/Kompetenzen: Weiterentwicklung bereits vorhandener diskursiver Fertigkeiten und Kompetenzen auf einem über die Stufe B2 des Gemeinsamen europäischen Referenzrahmens hinausgehenden Niveau, mit Hilfe derer auch jede Art von beruflicher und wirtschaftswissenschaftlicher Sprachhandlung auf Englisch vollzogen werden kann, wie z.B.: - Fähigkeit, mühelos an allen Unterhaltungen, Diskussionen und Verhandlungen mit allgemeinen und wirtschaftsbezogenen Inhalten teilzunehmen und dabei die Gesprächspartner problemlos zu verstehen sowie auf ihre Beiträge differenziert einzugehen bzw. eigene Beiträge inhaltlich komplex und sprachlich angemessen zu formulieren; - Fähigkeit, auch umfangreichere wirtschaftsbezogene Publikationen zu allen Themen zu verstehen und unter Anwendung spezifischer Sprachstrukturen und -konventionen sprachlich und stilistisch sicher selbst zu verfassen; - Erwerb spezifischer sprachlicher und stilistischer Strukturen der englischen Sprache sowie Entwicklung eines differenzierten wirtschaftswissenschaftlichen Wortschatzes; - Ausbau des operativen landeskundlichen und interkulturellen Wissens über die englischsprachigen Länder im beruflichen und wirtschaftlichen Kontext.	Arbeitsaufwand: Präsenzzeit: 56 Stunden Selbststudium: 124 Stunden
--	---

Lehrveranstaltung: Business English I (Übung)	4 SWS
Prüfung: (1) Portfolio: 2 mündl. Arbeitsaufträge (ca. 15 Min. - mündl. Ausdruck 25 %) und 2-3 schriftl. Arbeitsaufträge (insg. ca. 1000 Wörter - schriftl. Ausdruck 25 %); sowie (2) schriftl. Prüfung (insg. 90 Min. - Lese- und Hörverständen jeweils 25 %)	6 C

Prüfungsanforderungen:
Nachweis von sprachlichen Handlungskompetenzen in interkulturellen und wirtschaftsbezogenen Kontexten unter Anwendung der vier Fertigkeiten Hören, Sprechen, Lesen und Schreiben, d.h. Nachweis der Fähigkeit, rezeptiv wie produktiv auf eine über das Niveau B2 des Gemeinsamen europäischen Referenzrahmens hinausgehende Art mit für Wirtschaftswissenschaftler typischen mündlichen und schriftlichen Kommunikationssituationen umzugehen.

Zugangsvoraussetzungen: Modul Mittelstufe II oder Einstufungstest mit abgeschlossenem Niveau B2.2 des GER	Empfohlene Vorkenntnisse: keine
Sprache: Englisch	Modulverantwortliche[r]: Ashley Chandler
Angebotshäufigkeit: jedes Semester	Dauer: 1 Semester
Wiederholbarkeit:	Empfohlenes Fachsemester:

zweimalig
