

## **Scientist / Engineer**

for technical and application support and service

Accurion is a growing high tech company located in Goettingen, Germany. We serve two product areas: Halcyonics active vibration isolation and Nanofilm Surface Science instrumentation. We develop, produce and distribute innovative products for academic and industrial research. Our customers are well-known universities, research institutes and corporations.

Modern research today is using powerful and complex technologies. Our Nanofilm imaging ellipsometry product line is such a complex technology with complex data mining and analysis for sophisticated applications. Therefore we have a need to provide a high level of service and application support.

For our service team, we are looking to the earliest possible time for a scientist / engineer with experiences in using optical analysis tools.

### **Job Description:**

- "Customer maintenance" (request level of satisfaction, acquisition of maintenance and service contracts, application support, etc.)
- Service and repair work
- Support of the production: assembling and calibrating of the systems (important at the beginning to understand the systems)
- Support of the sales with installations, training and seminars and sample measurements
- Organization and realization of service trips

### **Your Profile:**

- Good communication skills and a good English is necessary
- Willingness to travel (up to 25 %) worldwide
- Willingness to learn about various applications to discuss and support existing and potential customers
- Experience in service of complex measurement technologies would be of advantage
- Experience in the use of complex measurement technologies would be appreciated
- Experience in optics and electronics are also beneficial

### **We are offering:**

- Competitive salary and attractive working conditions
- A small but dedicated team with a good mixture of physicist, chemists, engineers and technicians
- Good job training
- Attractive location in a famous university town
- The possibility to explore the world

Further information about our company, technologies and products are available on our website.

We look forward to receiving your application (PDF by e-mail is recommended).
